WD Service and Support

Should you encounter any problem, please give us an opportunity to address it before returning this product. Most technical support questions can be answered through our knowledge base or email support service at http://support.wd.com. If the answer is not available or if you prefer, please contact WD at the best telephone number shown below.

Your product includes 30 days of free telephone support during the warranty period. This 30-day period starts on the date of your first telephone contact with WD Technical Support. Email support is free for the entire warranty period and our extensive knowledge base is available 24/7. To help us keep you informed of new features and services, remember to register your product online at http://register.wd.com.

Accessing Online Support

Visit our product support website at http://support.wd.com and choose from these topics:

- **Downloads** — Download drivers, software, and updates for your WD product.
- **Registration** — Register your WD product to get the latest updates and special offers.
- **Warranty & RMA Services** — Get warranty, product replacement (RMA), RMA status, and data recovery information.
- **Knowledge Base** — Search by keyword, phrase, or answer ID.
- **Installation** — Get online installation help for your WD product or software.
- **WD Community** — Share your thoughts and connect with other WD users.
- **Online Learning Center** — Start here to get the most out of your cloud storage device (http://www.wd.com/setup).

Contacting WD Technical Support

When contacting WD for support have your WD product serial number, system hardware, and system software versions available.

Important User Information

Important Safety Instructions

Recording Your WD Product Information

Important Safety Instructions

This device is designed and manufactured to assure personal safety. Improper use can result in electric shock or fire hazard. The safeguards incorporated into this unit will protect you if you observe the following procedures for installation, use, and servicing.

- Follow all warnings and instructions marked on the product.
- Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
- Do not use this product near any liquids.
- Do not place this product on an unstable surface. The product may fall, causing serious damage to the product.
- Do not drop the product.
- Do not block the slots and openings on the top and bottom of the chassis; to ensure proper ventilation and reliable operation of the product and to protect it from overheating, these openings must not be blocked or covered. Making sure the drive is standing upright also helps prevent overheating.
- Operate this product only from the type of power indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- Do not allow anything to rest on the power cord. Do not locate this product where persons will walk on the cord.
- If an extension cord is used with this product, make sure that the total ampere rating of the equipment plugged into the extension cord does not exceed the extension cord ampere rating. Also, make sure that the total rating of all products plugged into the wall outlet does not exceed the fuse rating.
- Never push objects of any kind into this product through the chassis slots as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock.
- Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
  - When the power cord or plug is damaged or frayed.
  - If liquid has been spilled on the product.
  - If the product has been exposed to rain or water.
  - If the product does not operate normally when the operating instructions are followed. Adjust only those controls that are covered by the operating instructions since improper adjustment may result in damage and require extensive work by a qualified technician to the product to normal condition.
  - If the product has been dropped or the chassis has been damaged.
**WARNING!** This device uses a lithium battery, type CR2032. There is danger of an explosion if the battery is incorrectly replaced. Replace only with the same or equivalent battery type recommended by the manufacturer. Dispose of used batteries according to the manufacturer’s instructions.

**Recording Your WD Product Information**

Remember to write down the following WD product information, which is used for setup and technical support. Your WD product information is found on the label on the back of the device.

- Serial Number
- Model Number
- Purchase Date
- System and Software Notes
Product Overview

About the System
Finally, a cloud of your own. Save everything in one place with twice the data protection and access it anywhere from computers, tablets and smartphones. My Cloud™ Mirror™ Cloud Storage works concurrently with multiple operating systems such as Windows, Mac OS, iOS and Android with mobile apps.

Features

Your media and files on your own personal cloud – Unlike a public cloud, My Cloud Mirror allows you to keep all your content in one safe place on your home network instead of a remote server. No mysterious location of your data. No monthly fees. No limits. Just blazing-fast, dual-drive performance for your high-speed digital life.

Centralized, dual-drive storage of your family’s media collection – Store and organize all your family’s photos, videos, music, and important documents in one secure place on your home network.

Access from anywhere – Enjoy your photos, videos, music, and more from anywhere on your PC, Mac®, tablet, or smartphone. With WD’s free apps, your personal cloud is always with you.

Mirrored data protection - With Mirror Mode (RAID 1) as the default setting, one drive is used to store your data and the other is used for a duplicate copy. Your data is twice as safe, giving you twice the peace of mind.

Automatic file backup for all your computers – Easily back up the files from all the PC and Mac computers in your home. PC users, WD SmartWare™ Pro offers options for how, when, and where you back up your files. Mac users, utilize all the features of Apple® Time Machine® backup software to protect your data.

Remote backup – Protect your data with remote backup to another My Cloud Mirror, integrated cloud backup or local LAN/WAN backup.

Expand your tablet and phone storage – Upload photos and videos directly to your personal cloud from anywhere.

Connect to Dropbox™ and more – Easily transfer files between your personal cloud, Dropbox, and other public cloud accounts using WD’s free My Cloud apps.

Increase your personal cloud capacity -- Simply attach a compatible USB 3.0 hard drive directly to one of the two USB expansion ports on the My Cloud Mirror drive and instantly expand your storage capacity.

Transfer and stream faster – Gigabit Ethernet and 1.3 GHz processor deliver faster file transfers and high-speed streaming.
Unleash your media – Seamlessly stream your videos, photos, and music to your connected TVs, media players, gaming consoles, and other DLNA® – certified devices. With My Cloud Mirror’s iTunes® server, you can easily stream your music collection to any PC or Mac computer with iTunes.

Password protection for privacy – Your data is always safe and completely under your control. Protect your personal cloud from unauthorized access with password protection available for every user.

Set up in minutes – Get up and running in minutes with WD’s rich web-based user interface for seamless web-guided setup. WD’s software will auto-detect your drive to make it easy. Need extra help? Visit wd.com/setup/wdmycloudmirror for help with the installation of My Cloud Mirror and WD’s free apps for your computers and mobile devices.

About the Online Learning Center
WD’s online Learning Center provides the latest information, instructions, and software to help users get the most out of their cloud storage. This web-based guide offers step-by-step help with setting up remote access, backing up data, monitoring device status and more. It’s an interactive resource to walk users through installing and using their My Cloud Mirror device. The online Learning Center allows you to:

- Learn about your new cloud storage product.
- Download the latest software for your product.
- Find in-depth, interactive information on how to explore each of your product’s features.
- Update your product whenever new features become available.
- Access an always-available resource online, without a manual or CD.

Package Contents
- My Cloud Mirror Cloud Storage device
- Ethernet cable
- AC power adapter
- Quick Install Guide

### Requirements

#### Operating System

**Windows®**
- Windows 10
- Windows 8 or 8.1
- Windows 7
- Windows Vista®

**Mac OS X®**
- El Capitan (Mac OS 10.11)
- Yosemite (Mac OS 10.10)
- Mavericks (Mac OS 10.9)
- Mountain Lion (Mac OS 10.8)
- Lion (Mac OS 10.7)

**Note:** Compatibility may vary depending on your computer’s hardware configuration and operating system.
Web Browsers
- Internet Explorer 10.0 and later on supported Windows computers
- Safari 6.0 and later on supported Mac computers
- Firefox 30 and later on supported Windows and Mac computers
- Google Chrome 31 and later on supported Windows and Mac computers

Local Network
- Router/switch (Gigabit recommended to maximize performance.)

Internet
- Broadband Internet connection is required for initial setup and software downloads, as well as for remote access and mobile apps.

Pre-installation Instructions

Before beginning installation, select a suitable location for your device to obtain maximum efficiency. Place it in a location that is:

- Near a grounded power outlet
- Clean and dust free
- On a stable surface free from vibration
- Well ventilated, with nothing blocking or covering the slots and openings on the top and bottom of the device, and in fields from electrical devices such as air conditioners, radio and television receivers.

Handling Precautions

WD products are precision instruments and must be handled with care during unpacking and installation. Rough handling, shock, or vibration can damage the device drives. Observe the following precautions when unpacking and installing your external storage product:

- Do not drop or jolt the device.
- Do not move the device while it is powered on.
- Do not use this product as a portable device.
- Do not remove both data drives at the same time. This will cause your device to become unresponsive.
Getting Started

Physically Connecting the Device
Getting Started Using Online Setup Software
Accessing Content

It’s easy to set up the My Cloud Mirror Cloud Storage device -- all you have to do is unpack your device, connect it, and wait for the Power LED on the front of your device to turn a solid blue. Then, setup your system using the procedure “Getting Started Using Online Setup Software” on page 11.

For information about safely shutting down and disconnecting the device, see “Utilities” on page 91

Physically Connecting the Device

Follow the steps below to connect the My Cloud Mirror Cloud Storage device to a home or small office network.

**Important:** To avoid overheating, make sure the device is upright as shown in the illustration above and nothing is blocking or covering the slots and openings on the top and bottom of the device. In the event of overheating, the device will perform a safe shutdown, interrupting all processes currently being performed. If this occurs, data may be lost.

**Important:** We recommend that you use the enclosed Ethernet cable for optimal performance.
1. Using the provided Ethernet cable, connect one end of the cable directly into a router or network switch port.
2. Connect the other end of the Ethernet cable to the Ethernet port located on the back of the My Cloud device.
3. Connect one end of the power adapter into the power supply socket on the back of the device.
4. Plug the other end of the power adapter into a power outlet. The unit powers up automatically.

**Important:** Wait for the My Cloud Mirror device to finish powering up (approximately three minutes) before configuring it. You will know it is ready when the power LED stops flashing and turns blue.

5. When the power LED on your device turns a solid blue, continue to the “Getting Started Using Online Setup Software” section below.

**Getting Started Using Online Setup Software**

The online setup software walks you through the steps to easily connect your device to your home or small office network. Use the following steps to run the online setup software, discover the device, and get started using it.

**Connecting to the Network and Creating a Personal Cloud**

1. Open a web browser and type `http://mycloud.com/setup` to display the welcome page.

2. On the Welcome page, click Get Started.
   The setup software begins searching for your My Cloud device. When your device is found, a screen displays showing your device and IP and MAC addresses.
3. Follow the on screen instructions to complete the setup process and install WD Sync.
4. After setup is complete and WD Sync has been installed, a window displays the most common folders on your computer. Select the folders on your computer that you want to sync with your My Cloud device and click Next.
5. WD Sync setup is complete. Click Close to exit WD Sync setup.

**Note:** The WD Sync shortcut might be under Show Hidden Icons in your taskbar.
Accessing Content

The preferred method to access content anywhere is by using MyCloud.com. However if you want to access content over your local network, My Cloud Mirror supports Windows- and Mac-based transfers.

The My Cloud Mirror device’s Public folder contains Shared Music, Shared Pictures, and Shared Videos subfolders. The existing content of the subfolders are files that you dragged and dropped or files that have been backed up from your computer or an attached USB drive.

**Note:** Any of the folders can hold any file type.

Once you’ve physically connected your My Cloud Mirror device (see “Physically Connecting the Device” on page 10), use the following steps to access the contents of your device.

### If your operating systems is...  **Then...**

| Windows 10 / Windows 8 or 8.1                                                                 | 1. On the Start page, type **Computer**.  
|                                                                                              | 2. Click **Computer**.  
|                                                                                              | 3. In the left pane, click **Network**.  
|                                                                                              | 4. Double-click the My Cloud Mirror device and locate the device’s Public folder.  
|                                                                                              | 5. Double-click the Public folder to display the Shared Music, Shared Pictures, and Shared Videos subfolders. You can now drag and drop files into (and from) the shared media folders using Windows Explorer. |
| Windows Vista / Windows 7                                                                    | 1. Click or **Start > Computer > Network > My Cloud device** and, if required, enter your share credentials. The device’s Public and private folders (shares) appear.  
|                                                                                              | 2. Double-click the Public folder to display the Shared Music, Shared Pictures, and Shared Videos subfolders. You can now drag and drop files into (and from) the shared media folders using Windows Explorer. |
### Mapping the Public Folder (Windows)

To map the My Cloud Mirror Public folder for quick access in the future:

1. In Windows Explorer, under Network, click **WDMYCLOUDMIRROR**.
2. Right-click the Public folder and select **Map Network Drive** from the menu.
3. Select an available letter from the **Drive** drop-down list.
4. Select the **Reconnect at login** check box.
5. Click **Finish**. Your Public drive is now mapped.

### If your operating systems is...  Then...

| Mac OS X  | 1. In a Finder window, click the My Cloud Mirror device under the shared items in the side bar.  
| (Maverick, Mountain Lion, Lion) | 2. If presented with an authorization page, enter your User name and password or select **Guest** and click **Connect** to display the Public share.  
| | 3. Double-click the Public folder to display the subfolders: Shared Music, Shared Pictures, and Shared Videos. You can now drag and drop files into the shared folders using Finder.  
| | 4. If you want to create a shared drive icon permanently on your desktop, create an alias. There are two ways to do this:
| | **Note:** Before creating an alias, click **Finder > Preferences > General** and make sure **Connected Servers** is checked.  
| | - Click the item you wish to alias (for example, Shared Music), hold down the mouse button, hold down the **Cmd** and **Option** keys simultaneously, then drag the item to where you’d like to make an alias. Instead of moving the original item, this action creates an alias at the new location.  
| | - OR -  
| | - Right-click the item you want to alias (for example, Shared Music) and click **File > Make Alias**.  

If your operating systems is...

| Windows  | Then...  
| | 1. In Windows Explorer, under Network, click **WDMYCLOUDMIRROR**.
| | 2. Right-click the Public folder and select **Map Network Drive** from the menu.
| | 3. Select an available letter from the **Drive** drop-down list.
| | 4. Select the **Reconnect at login** check box.
| | 5. Click **Finish**. Your Public drive is now mapped.
Accessing Your Cloud Remotely

Enabling Cloud Access for the My Cloud Mirror Device
Configuring Cloud Access for a User
Mobilizing Your Files with the iOS or Android Mobile App

A personal cloud is your content, at home, secure and under your control. Unlike public clouds, a personal cloud allows you to keep all of your content in one safe place on your home network. Share files, stream media, and access your content anywhere, from your PC or Mac computer and from mobile devices. No monthly fees. No mysterious location for your data. Keep your videos, music, photos, and files safe at home and always with you.

This chapter explains how to set up the My Cloud Mirror device for remote access and describes some of the ways you can take advantage of its many capabilities.

Enabling Cloud Access for the My Cloud Mirror Device

Before you can use your My Cloud Mirror device remotely, it must be enabled for cloud access (enabled is the default). To verify that the My Cloud device is enabled for remote access and to check the status of its remote connection(s), see “Cloud Access” on page 79.

Configuring Cloud Access for a User

Once you've enabled cloud access on the My Cloud Mirror device, use the following steps to give remote access capability to your device users.

1. On the navigation bar, click the Cloud Access icon.

2. In the left pane, select the user you’d like to configure for cloud access.

3. In the MyCloud.com Account for <user name> area, click the Sign up button.
4. Enter the user’s email address. This email address is used to send the user confirmation information and instructions on setting up and activating a password for cloud access.
5. Click Save.

To generate an activation code for a user’s mobile device(s), do the following:

**Important:** Codes are valid for 48 hours from the time of the request and can be used only once.

1. In the Cloud Devices for <user name> area at the bottom of the screen, click Get Code. You’ll need to generate one code for each mobile device and app you want to activate. A dialog box displays the user’s activation code and its expiration date and time.

   **Note:** Make sure to write down the access codes you generate.

2. Click OK. Once you use the code(s), the Configure Access page displays the cloud devices to which the user now has access along with the activation code used.
Mobilizing Your Files with the iOS or Android Mobile App

The My Cloud Mobile app allows you to access all the content on your personal cloud from any device.

About the My Cloud Mobile App

Save valuable space on your mobile devices with easy photo and video uploads directly to your personal cloud, then securely access and share your memories.

The My Cloud mobile app also allows you to easily transfer files between your personal cloud, Dropbox™, and other public cloud accounts.

With My Cloud mobile app, you can:

- Open and view the important files stored on your My Cloud Mirror device from anywhere without copying them to your mobile device.
- Show off the photos stored on your My Cloud Mirror device.
- Connect to other cloud sites such as Dropbox from your tablet or smartphone.
- Stream and enjoy music and video files stored on your My Cloud Mirror device.

**Note:** Video streaming performance is best over your LAN and when your mobile device is connected using Wi-Fi wireless connections. WAN streaming performance may be limited by upload speeds on your home Internet connection.

- Share your presentations on your Apple or Android tablets. Your My Cloud app supports most major file types, such as Microsoft Word documents, Microsoft Excel spreadsheets, and PowerPoint presentations.

For more features and instructions, see the Help, Guide Me page, and Quick Tips within the My Cloud mobile app, or go to [http://mycloud.com/learn](http://mycloud.com/learn).

**Note:** My Cloud app brings your data from your personal cloud to your tablet, handset, or other portable devices using Google Android or Apple iOS. My Cloud provides a convenient file list of the My Cloud Mirror device contents and then launches your favorite player or viewer for any files you want to open. For file types your mobile device supports, see the device’s manual.

Requirements

- My Cloud Mirror cloud storage with the most recent firmware, connected to the Internet.
- Access to cloud services requires the My Cloud Mobile app and an active Dropbox, Google Drive, or OneDrive™ account.
- iOS iPhone or iPad running versions 7.0 or later software.
- Android smartphone or tablet running versions 4.0 or later software.

Installing the My Cloud Mobile App

Download the My Cloud mobile app from the Apple App or Google Play store and install it on your mobile device.
Managing Users, Groups, and Shares

About Users

The Administrator, normally the device owner, is the person in charge of setting up the device. As the My Cloud Mirror device owner, you have a special user account (admin) that provides you with administrator privileges. With these privileges, you can set up and configure the device to your specific needs and add other users to your personal cloud. You also have the power to determine exactly what users can access on the device.

As a default, the administrator (admin) user name does not have a password. You can create one at anytime (see “Updating a User Password” on page 22).

Note: Only one individual at a time can use the Administrator logon ID to log into the web browser app. Because of this, ensure that you log out of the My Cloud Mirror device web browser app when you're not using it. This allows other users authorized to use the Administrator logon ID to access the web browser app.

See Energy Saver - Web Access Timeout on “Energy Saver” on page 80 to automatically log out of the app after a set amount of time.

The Users screen displays a list of the current users and allows the Administrator to view user details, create new users, create groups, and grant a user access to existing shares and groups.

Viewing Users

1. On the navigation bar, click Users to display the Set Up Users screen.
2. To view user details, click a user name on the left pane. The user’s profile and share access information display. A user can have read only, read/write, or no access to a share.

![Set Up Users](image)

**Note:** The shares in the Share Access section that don’t require access permission are grayed out. Once you make a share private, the share displays in the list and you can edit it. (See “Making a Share Private” on page 29.)

### Adding a Single User

The Administrator adds user accounts and sets the parameters of the shares that a user can access. Use the following steps to add a single user account.

1. To add a user, click ![user-icon](image) in the lower left side of the screen.
2. Enter the User Name, First Name, Last Name, Email address (optional) and password of the user you’d like to add and click **Apply**.

![Add User](image)

A new user account is created and appears on the User Profile screen shown below.

**Note:** When you enter the email address on the Add User screen, a new cloud access account is created. Once created, the new user receives an email with instructions on how to set up and activate a password for cloud access.
3. On the User Profile screen, you can modify a user password, modify a group, and/or configure a quota amount.
   - To modify or configure a password, see “Updating a User Password” on page 22.
   - For information on assigning a user to a group, see “Assigning a User to a Group” on page 23.
   - For information on Quota Amounts, see “Quota Rules” on page 23.

Adding Multiple Users

Use the following steps to add multiple user accounts:

1. To add multiple users, click **Add Multiple Users** in the lower left side of the screen.

2. Select how you’d like to enter your users into the device and click **Next**:
   - **Create Multiple Users**: Allows you to enter users manually. See “Creating Multiple Users” on page 20.
- **Import Users**: Allows you to import a list of users into the device. Continue to “Import Multiple Users” on page 21.

![Create Multiple Users](image)

### Creating Multiple Users

1. Enter the following information on the Create Multiple Users screen and click **Next**:
   - **Username Prefix**: Enter a prefix for your user name. This will be added to the Account Prefix to create the User Name. (Example: HR)
   - **Account Prefix**: Enter a numeric account prefix. This will be added to the Username Prefix to create the User Name. (Example: 143)
   - **Number of Users**: Enter the number of user accounts you’d like to create. The maximum number you can add displays to the right.
   - **Password**: Enter a password for the user accounts.
   - **Confirm Password**: Confirm the password for the user accounts.
   - **Overwrite Duplicate Accounts** (optional): Select the Overwrite Duplicate Accounts check box to overwrite any existing duplicate accounts on your device.

![Create Multiple Users](image)

2. To assign the new users to a group, click the check box next to a group and click **Next**.

![Create Multiple Users](image)
3. Enter the Quota Amount or leave the values blank for unlimited space and click **Next**. (See “Quota Rules” on page 23.)

4. Your new user accounts display on screen. Click **Apply** to save them to your device.

**Import Multiple Users**

1. To import multiple users, click **Add Multiple Users** in the lower left side of the Set Up Users screen.

2. Select **Import Users** and click **Next**.
3. Click **Download** to download a .txt file identifying the format you’ll need to set up your user import file.

4. Create and save your import file. Your import file should be formatted as follows:
   - **User import file format**: user name/user password/user groups/ shared folder(rw)/ shared folder(ro)/ shared folder(deny)/user quota
   - **Example**: user/pw/g1:g2/folder1:folder2/folder3:folder4/folder5:folder6/0:0:0:0

5. Click **Import User List** and select the import file you created.

6. Click **Next**.

7. Select the apps you’d like the new user accounts to have access to and click **Next**. The Create Multiple Users screens appears.

8. Click **Save**. Your new user accounts save to your personal cloud.

### Editing User Settings

1. On the Set Up Users screen, select the user whose information you want to edit. The User Profile and Share Access panels display.

2. Modify the required and optional settings as desired.

3. If a private share has been created on the Share screen, it displays in the Share Access area of the Set Up Users screen. You can assign an access level to it for each user. (See “Making a Share Private” on page 29 for information on creating a private share.)

### Updating a User Password

When viewing details about a user, the Administrator can add or change the user’s password (no password is the default setting).

Use the following steps to update a user password:

1. On the Set Up Users screen, select a user from the list on the left.

2. Click the toggle button if no password has been previously created.

3. Click **Configure** to the right of the toggle button to display the Edit Password screen:

4. Enter the new password in both the Password and Confirm Password fields.

5. Click **Apply**.
Assigning a User to a Group

Use the following steps to assign a user account to a user group:

1. On the Set Up Users screen, select the user from the left pane.
2. In the Group Membership field, click Configure.
3. Select the check box next to the group you’d like the user to join and click Apply.

Quota Rules

Assigning user quotas allows you to better control the disk space allocated to a user or a group. There are various rules dictating which quota takes precedent over another.

- User quota must be \leq\ the group quota (e.g., if your group has a 20 GB quota and you try to set the user quota to 30 GB quota, you will be prompted to reduce your user quota to be equal to or less than the group quota).
- If the user quota is not set, the group quota is assigned to the user.
- When a user quota is set prior to the user joining a group and a group is assigned:
  - If the user quota > group quota, the individual user’s quota is automatically reduced to the group quota amount.
  - If the user quota is \leq\ group quota, the individual user quota remains unchanged.

Assigning Quotas to a User

A quota determines the amount of disk space allocated to the user on the My Cloud Mirror device.

Use the following steps to assign a quota to a user account:

1. On the Set Up Users screen, select the user from the left pane.
2. In the Quotas field, click Configure.
3. Enter the amount of space to assign to the user on the My Cloud Mirror device.
   - To assign unlimited space, leave the Quota Amount field(s) blank.
4. Click Apply.

Removing a User

Use the following steps to delete users from the My Cloud Mirror device.

**Note:** The Administrator account cannot be deleted.

1. On the Set Up Users screen, in the left pane, select the user you’d like to delete.
2. Click the Remove User icon.
3. In response to the confirmation message, click OK. The user account is removed from the device and no longer displays in the user account list.

**About Groups**

A group allows easier management of multiple users. The permissions and privileges you assign to group accounts determine the actions that can be taken by that group.

**Viewing Groups**

1. On the navigation bar, click **Users** to display the Set up User screen.
2. Click the **Group** tab below Set Up Users.
3. To view group details, click a group name on the left pane. The group profile displays.

---

**Adding a Group**

1. To add a group, click **+** on the lower left of the Set Up Groups screen.
2. Enter a Group Name.
3. Click the check box next to the users you’d like to add to your new group and click **Apply**.
4. On the Set Up Groups>Group Profile screen for the group you just added, click **Configure** next to Quotas.

![Marketing's Quota](image)

5. Enter the Quota Amount, or leave the values blank for unlimited space, and click **Apply**. Your new group account displays on the left pane of the Set Up Groups screen.

**Editing Group Settings**

1. On the Set Up Groups screen, select the group whose information you’d like to edit. The Group Profile and Share Access panel displays.

2. Modify the required and optional settings as desired. To update the group’s access to shares, see “Assigning Share Access to Groups” on page 25.

**Assigning Share Access to Groups**

Once a group account is created, you can assign access to the various shares on your My Cloud Mirror device using the following steps:

1. On the Set Up Groups screen, select the group for which you’d like to assign a share.

![Set Up Groups](image)

**Note:** A share must first be made private on the Shares screen. All public shares are grayed out.

2. In the Share Access area, click one of the following icons to indicate the type of access to the share:
**Read/Write Access:** Select this option to provide the group account with read/write access to the selected share. The group members can view and update the share.

**Read Only Access:** Select this option to provide the group account with read only access to the selected share. The group member can view the share but can’t update it.

**Deny Access:** The group has no access to this share.

The group is updated with your share access selection.

### Assigning Quotas to a Group

Use the following steps to assign a quota to a Group. A quota determines the amount of space assigned to the user on the My Cloud Mirror device. (See “Quota Rules” on page 23 for information on quotas.)

1. On the Set Up Groups screen, select the group from the left pane.
2. In the Quotas field, click **Configure**.
3. Enter the amount of space you’d like to assign to the group on the My Cloud Mirror device. To assign unlimited space, leave the Quota Amount field(s) blank.
4. Click **Save**.

### Removing a Group

Use the following steps to delete a group from the My Cloud Mirror device.

1. On the Set Up Group screen, select the group you’d like to delete in the left pane.
2. Click the **Remove Group** icon 🗑️.
3. In response to the confirmation message, click **OK**. The Group account is removed from the device and no longer displays in the Group account list.

### About Shares

A share is an area on the My Cloud Mirror device for storing files (similar to a folder or directory).

**Note:** In this manual, we use the terms share and folder interchangeably.

A share can be public so that all users can access the contents, or private to limit access to selected users. The **Shares** icon on the navigation bar displays a list of shares on the My Cloud Mirror device and enables the Administrator to manage shares and user access.

### Viewing a List of Shares

Click the **Shares** icon on the navigation bar to display a list of shares on the My Cloud Mirror device. For each share name, the description, media serving, and public access status display.

Use the following steps to view a list of shares.
1. On the navigation bar, click **Shares** to display the About Shares page.

2. Click a share to display its profile and share access information.

   ![Set Up Shares](image)

   **Note:** You can only configure permissions if a share is private. Public shares always have read/write access and are grayed out.
Creating a New Share

You can create a share and designate it as public or private. For example, if the share contains financial information, you might want to make the share private. Or, if there are photos you would like a friend to see, you can make the share public.

1. Click the Shares icon on the navigation bar to display the About Shares screen.
2. Click the Add a Share icon.

3. Enter the share name and description:

<table>
<thead>
<tr>
<th>Share Name</th>
<th>Assign a name to the share. (Names must be case sensitive and contain 1-32 alphanumeric characters but no spaces.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Share Description (optional)</td>
<td>Enter a brief description of the share to remind yourself of what it contains. Note that share descriptions must begin with an alphanumeric value and can contain up to 256 characters.</td>
</tr>
</tbody>
</table>

4. Click Apply. The Share Profile panel displays.
5. Refer to the table below and edit the Share Profile and Share Access settings, for the selected share.

<table>
<thead>
<tr>
<th>Public</th>
<th>To grant public access to the selected share, click the toggle button to ON. (Default is OFF)</th>
</tr>
</thead>
</table>
| Enable Recycle Bin (optional) | The Recycle Bin contains any files deleted from the My Cloud Mirror device. If you’d like to use the Recycle Bin, click the toggle button to ON. (The Default is OFF.)  

Note: The Recycle Bin is only available for Windows SMB files. |
| Enable Media Serving (optional) | This option allows you to stream media stored in this share to other devices. If you’d like to Enable Media Serving, click the toggle button to ON. (The Default is OFF.)  

Note: The media server must be enabled for the device before you can provide media serving for a share. See “Enabling DLNA” on page 69 for instructions on enabling media serving for the device. |
| oplocks | This option allows you to turn oplocks (Optimistic concurrency control) off and on. To turn it off, click the toggle button to OFF. (The Default is ON.)  

oplocks, also referred to as OCC, is a tool to improve data management and performance for systems with low data contention. |
| FTP Access (optional) | This option allows FTP access on this share. If you’d like to use FTP Access, click the toggle button to ON.  

Note: FTP access must be enabled before you can provide FTP access for a share. See “Network Services” on page 84 for instructions on how to enable FTP access. |
| WebDAV Access (Optional) | This option allows WebDAV access on this share. If you’d like to use WebDAV Access, click the toggle button to ON.  

Note: WebDAV access must be enabled before you can provide WebDAV access for a share. See “Network Services” on page 84 for instructions on how to enable WebDAV access. |
| NFS Access | NFS (Network File System) is a protocol that allows a user to access files over a network. Common with Unix, Linux, and some versions of Mac OSx. See “Network Services” on page 84 for more information. |

**Editing Share Settings**

1. On the Set Up Shares screen, select the share you’d like to edit. The Share Profile panel displays.

2. Modify the required and optional settings as desired.

**Making a Share Private**

If you decide there is a reason to limit access to a public share, convert it to a private share:
1. On the Set Up Shares screen, select the share:

   ![Share Access](image)

2. Switch the **Public Access** button to OFF.
3. For each user listed in the **User Access** section, select the level of access by clicking the appropriate icon for the share (read/write, read only, or no access).

**Deleting a Share**

**WARNING!** Deleting a share erases all files and folders on the share.

1. Select the share in the list of shares on the About Shares page.
2. Click the **Delete Share** icon.
3. In response to the confirmation message, click **OK**.

**Accessing the Contents of a Share Locally**

**Note:** For information on accessing the contents of a share remotely, see “Accessing Your Cloud Remotely” on page 14.

Several options are available for opening a My Cloud Mirror share. For a private share, the user must have:

- A user name and password assigned to the share name
- Read-only or full access to the share

**Note:** The table below refers to WD Access, an application that helps you perform important functions quickly. WD Access is automatically installed during My Cloud setup.
<table>
<thead>
<tr>
<th><strong>IF you want to open a share using . . .</strong></th>
<th><strong>THEN . . .</strong></th>
</tr>
</thead>
</table>
| **WD Access icon in the system tray (Windows)** | 1. Left- or right-click the WD Access icon to display the main menu.  
2. Click the My Cloud device name and click **Open**. The shares display in Windows Explorer.  
3. For a private share, if prompted for a user name and password, enter those associated with your user account.  
4. For a private share, if the user's name and password are the same as for logging into the computer, a user name and password are not required. If they are not the same, visit [http://support.wd.com](http://support.wd.com) and see Knowledge Base Answer ID 5681. |
| **WD Access in the menu bar (Mac OS X)** | 1. Click the **WD Access** icon in the menu bar and move the cursor over the name of your My Cloud device to display the submenu.  
2. Select **Open** on the WD Access submenu. The shares display in a second submenu.  
3. Select the desired share.  
4. For a private share, if prompted for a user name and password, enter those associated with the user account (see “Adding a Single User” on page 18).  
5. For a Public share, if prompted for a user name and password, select **Guest**. |
| **Windows 10 / Windows 8 or 8.1** | 1. In the task bar, click the **File Explorer** icon.  
2. In the left panel, select **Network** and double-click **WDMyCloudMirror**.  
3. Double-click a Public or private share on your device. |
| **Windows Vista/Windows 7/Windows XP** | 1. Click or **Start > Computer**.  
2. In the left panel, select **Network**  
3. Click **WDMyCloudMirror**.  
4. Double-click the Public or private shares on your device. |
| **Mac OS X** | 1. Open a Finder window and locate your My Cloud device under the Shared heading in the side bar.  
   If presented with an authorization page, select **Guest** and click **Connect**.  
2. Click the device to display the Public share and any private shares to which you have access. |
The Dashboard at a Glance

Launching the Dashboard

Use the My Cloud Mirror dashboard to configure settings and to manage the device as you prefer. For example, you can set up user accounts and restrict access to the files on your My Cloud Mirror device, set up folders for storing files, enable remote access, and customize the device to suit your needs.

Launching the Dashboard

Use one of the following methods to launch the dashboard.

Note: WD Access and WD SmartWare are helpful WD apps that you can download from the online Learning Center Downloads page at: http://mycloud.com/learn

<table>
<thead>
<tr>
<th>IF you want to launch from . . .</th>
<th>THEN . . .</th>
</tr>
</thead>
<tbody>
<tr>

Viewing Device Status and Making Updates on the Home Page

The main body of the Home page shows the status of the device and its functions and provides shortcuts to the most necessary tasks.

**Capacity**

The Capacity panel displays the amount of free storage left on your My Cloud Mirror device and how the storage is allocated.

*Note:* Storage allocation information only appears when the Cloud Services option is ON. See “Cloud Access” on page 79 for steps to enable Cloud Services.

**Device**

The Device section identifies the overall health of the system, indicates the current version of your firmware, and informs you if firmware updates are available.
Diagnostics
The Diagnostics section displays a snapshot of the system's components and identifies the overall health of the My Cloud Mirror device.
1. To see details about the status of system components, click the arrow on the right.
2. To return to the Home page, click Close.

Firmware
The Firmware section displays the current version of firmware loaded on your My Cloud Mirror device. A blue check mark indicates that your firmware is up-to-date.

Note: If new firmware is available, see “Firmware Update” on page 100 for information on updating your My Cloud Mirror device.

1. To view whether an updated version of the firmware is available, click the arrow to the right of Firmware to display firmware availability:
2. If an update is available, click Install and Reboot to update your device.
3. To return to the Home page, click OK or Cancel.

Network Activity
The Network Activity panel displays the system activities and processes that are running on your My Cloud Mirror device. At a glance, you can see the network, CPU, and RAM activity.

1. To view a list of all the system activities and processes that are running on your My Cloud Mirror device, click the arrow on the right of the panel to display the device activity panel.
- **CPU**: Click the right arrow to view the CPU activity. Click **Back** to return to the Device Activity pane. Click **Close** to return to the Home page.

- **Memory**: Click the right arrow to view the Memory activity. Click **Back** to return to the Device Activity pane. Click **Close** to return to the Home page.

- **Network**: Click the right arrow to view the network activity. Click **Back** to return to the Device Activity pane. Click **Close** to return to the Home page.
- **Process**: Click the right arrow to view the process information, including the list of active processes and the amount of CPU and Memory usage for each process. Click **Back** to return to the Device Activity pane. Click **Close** to return to the Home page.

![Device Activity]

**Cloud Devices**

The Cloud Devices panel displays the number of cloud devices currently accessing the My Cloud Mirror device remotely. In this example, one cloud device is accessing it remotely.

![Cloud Devices]

1. To add cloud access for a user, click the plus sign (+) in the lower right of the panel to display:

![Add Cloud Access]

2. To generate an activation code, click **Get Code**.
3. Follow the page instructions to connect your tablet or mobile device to the My Cloud Mirror device.

**Users**

The Users panel displays the number of users currently set up to use the My Cloud Mirror device.

![Users]
1. To add a user, click the plus (+) sign in the lower right of the panel:

![Add User Form]

**Note:** When you enter the email address on the Add User screen, a new account is created for cloud access. The user receives an email with instructions on how to set up and activate a password for cloud access.

2. Enter the required information and click **Apply**.

**Note:** Users can also be added, and configured, from the Set Up Users page.

**Apps**

The Apps panel displays the apps currently installed on your My Cloud Mirror device.

![Apps Panel]

1. To view the installed apps, click the arrow in the lower right of the panel to display:

![Installed Apps]

**Note:** To install an app, see “Managing Apps on My Cloud Mirror” on page 57.

2. To return to the Home page, click **Close**.
Managing Alerts

Alerts display system messages containing pertinent information about the status of your My Cloud Mirror device. Three three types of alerts appear on the upper right of the dashboard.

<table>
<thead>
<tr>
<th>Alert Icon</th>
<th>Type of Alert</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Info Icon" /></td>
<td>Informational</td>
<td>Informational alerts keep you updated on non-vital system information. Example: Reboot Required</td>
</tr>
<tr>
<td><img src="image" alt="Warning Icon" /></td>
<td>Warning</td>
<td>Warnings present a condition that might cause a problem in the future. Example: Network Disconnected.</td>
</tr>
<tr>
<td><img src="image" alt="Critical Icon" /></td>
<td>Critical</td>
<td>This alert presents an error or problem that has occurred, usually a system failure. Example: Fan Not Working</td>
</tr>
</tbody>
</table>

Viewing Alert Details

1. On the dashboard, click the Alert icon ![Alert Icon](image) in the upper right corner.
2. From the Alert list, click the arrow ![Arrow Icon](image) next to the alert you’d like to view, or click View All to review details for all of your alerts.

When an alert occurs, the alert message displays the Alert icon ![Alert Icon](image) and window within the dashboard. To close the alert message, click Close.
Dismissing an Alert

1. On the dashboard, click the Alert icon in the upper right corner.
2. Select the delete icon next to the alert you’d like to dismiss.

To dismiss all alerts, click **View All** and **Dismiss All**.
Obtaining Customer Support

To open the Support page:
1. Click the Help icon on any page to display the Help menu.
2. Click Support to display the following page:

If a problem occurs with the My Cloud Mirror device, WD Technical Support will need information about your device to troubleshoot and determine the best solution. There are two ways to get your device info and request support:

- Run a system report and send it to WD automatically,
- Create a system report manually and send it to WD.

Requesting Automatic Support

In the Request Automated Customer Support section:
1. Click the Privacy Policy link to review WD's privacy policy.
2. Click the Attach my device’s diagnostic report and request support check box.
3. Click the Request Support button.

Creating and Saving a System Report

In the Create and Save System Report section:
1. Click Create and Save. This saves the file to your computer.
2. If desired, email the report to WD Technical Support.
Obtaining Other Support

The Support Resources section contains links to additional resources:

- To obtain the most recently updated user manual, click the **Product Documentation** link.
- To see answers to frequently asked questions and instructions, click the **FAQs** link.
- To discuss your My Cloud Mirror device with other users, click the **Forum** link.
- To see WD phone numbers and other contact information, click the **Contacts** link.

Common Tasks

The next few chapters step you through the procedures for configuring and using the My Cloud Mirror device. The following table provides shortcuts to instructions for some common tasks.

<table>
<thead>
<tr>
<th>How do I ...</th>
<th>See ...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set up the device on my network</td>

Back up and Retrieving Files

About Backups
There are various ways to back up your data on the My Cloud Mirror device. These include:
- **USB Backup**—Allows you to back up My Cloud Mirror device data to and from your
  a USB device.
- **Remote Backup**—Allows you to back up My Cloud Mirror device data to and from
  another My Cloud Mirror device.
- **Internal Backup**—Allows you to back up data from one storage location to another
  on your My Cloud Mirror device.
- **Cloud Backup**—Allows you to backup My Cloud Mirror device data to an external
  cloud backup service.

Managing a USB Device and USB Backups
When you attach a USB drive to the My Cloud Mirror device, you turn it into a network drive.
Once connected, the USB drive has the following capabilities:
- When you connect an external USB drive such as a WD Passport, a memory stick,
  or a camera to the My Cloud Mirror device, you can access it with Windows Explorer
  or Mac Finder.
- The USB drive can serve as a target for backups.
- You now have the option of mapping the drive as a user share drive.
- If a WD external drive has been locked, when it is attached to the My Cloud Mirror
  device, it maintains that security. Using the Dashboard, you can unlock or
  re-lock it as desired.

Connecting A USB Drive
Connect a USB hard drive to the USB port on the rear of your My Cloud Mirror device for
additional storage and backup capabilities. The USB drive appears as a share on the
My Cloud Mirror dashboard. (See “About Shares” on page 26.)
The My Cloud Mirror device supports the following formats for externally attached USB
drives:
- FAT/FAT32
- NTFS (read and write capability)
- HFS+J
- Linux Ext2, Ext3/Ext4
- XFS

**WARNING!** Mounting or ejecting a USB drive while performing an NFS
or AFP file transfer will interrupt the file transfer process.
Creating a USB Backup

Use the following steps to back up your data on your My Cloud Mirror to or from a USB device.

1. On the navigation bar, click **Backups** to display the Backups screen.

2. Click **USB Backups**, if not already selected.

3. Click **Create Job**.

4. Enter the following information to create a USB backup job:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Job Name</td>
<td>Enter a Job Name for your backup.</td>
</tr>
<tr>
<td>Direction</td>
<td>Indicate the direction of your backup from the drop-down list. Options include:</td>
</tr>
<tr>
<td></td>
<td>- USB to NAS: Backs up the data on your USB device to the My Cloud Mirror device.</td>
</tr>
<tr>
<td></td>
<td>- NAS to USB: Backs up the data on your My Cloud Mirror device to a USB device.</td>
</tr>
<tr>
<td>Source Folder</td>
<td>Click <strong>Browse</strong> and select the folder you’d like to backup.</td>
</tr>
<tr>
<td>Destination Folder</td>
<td>Click <strong>Browse</strong> and select the destination folder for your backup.</td>
</tr>
</tbody>
</table>
5. Click **Create**.
6. In the USB Backup Jobs area, click the arrow to begin your backup.
   The progress of the backup displays in the USB Backup Jobs area.

### Viewing the Details of a USB Backup Job

1. On the USB Backups screen, under USB Backup Jobs, select the job you’d like to view the USB details for, and click the **Details** icon.
2. Review the USB Details screen and click **Close** to close the screen.

### Editing a USB Backup Job

1. On the USB Backups screen, under USB Backup Jobs, select the job you’d like to modify and click the **Edit** icon.
2. In the USB Backup area, make the necessary changes to your job and click **Save**.

### Deleting a USB Backup Job

1. On the USB Backups screen, under USB Backup Jobs, click the **Delete** icon next to the job you’d like to delete.
2. In response to the confirmation message, click **OK**. The selected USB Backup job is now deleted and removed from the USB Backup Jobs list.
Remote Backups

Back up your My Cloud Mirror device to another My Cloud Mirror device.

Before you proceed with a remote backup, ensure the following:

- You have a remote My Cloud Mirror device to back up this device to. Existing shares and data from this device will be copied to the target device in addition to previously existing data.
- The remote Server setting is turned ON in the remote My Cloud Mirror device.
- The backup password for the remote My Cloud Mirror device is enabled.
- You have enabled port forwarding to see the remote My Cloud Mirror device over the Internet.

For additional information on remote backups, see Knowledge Base Answer ID 10637.

Creating a Remote Backup

Use the following steps to back up your My Cloud Mirror to a remote device.

1. On the navigation bar, click **Backups** to display the Backups screen.
2. Click **Remote Backup**.
3. Click **Create Job**.
4. Enter the following information to create a remote backup job.

<table>
<thead>
<tr>
<th>Job Name</th>
<th>Enter a Job Name for your backup.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Server</td>
<td>Select the remote server from the drop-down list.</td>
</tr>
<tr>
<td>Remote IP Address</td>
<td>Enter the IP address of the remote server that you like to use to backup this device.</td>
</tr>
<tr>
<td>Password</td>
<td>Enter the password the password for the remote backup server.</td>
</tr>
<tr>
<td>SSH User Name</td>
<td>sshd</td>
</tr>
<tr>
<td>SSH Password</td>
<td>Enter the sshd password.</td>
</tr>
<tr>
<td>Source Folder</td>
<td>Click Browse and select the folder you’d like to backup.</td>
</tr>
<tr>
<td>Destination Folder</td>
<td>Click Browse and select the destination folder for your backup.</td>
</tr>
<tr>
<td>Backup Type</td>
<td>Choose the backup type from the drop-down list.</td>
</tr>
<tr>
<td>Recurrence</td>
<td>If you’d like to use the Recurring Backup feature:</td>
</tr>
<tr>
<td></td>
<td>1. Click the toggle button to enable the Recurring Backup feature.</td>
</tr>
<tr>
<td></td>
<td>2. Select the frequency of the backup: Daily, Weekly, Monthly.</td>
</tr>
<tr>
<td></td>
<td>3. Select a time (hour and minutes) from the drop-down menu.</td>
</tr>
<tr>
<td>Transfer Encryption</td>
<td>If you want transfer encryption, click the toggle button to ON.</td>
</tr>
</tbody>
</table>

5. In the Remote IP field, enter the IP address of the remote backup server.
   (Example: 192.168.1.16)

6. In the Password field, enter the password for the remote backup server and click Next.

7. Place a check mark in the box next to the share where you’d like to back up your data and click Next.

8. Enter the following information to create a Remote backup job and click Next:

<table>
<thead>
<tr>
<th>Job Name</th>
<th>Enter a Job Name for your backup.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Update</td>
<td>Click the toggle button to enable the Autoupdate feature.</td>
</tr>
<tr>
<td>Backup Now</td>
<td>Click Yes to begin your remote backup now. Click No to create a remote backup job for future backup.</td>
</tr>
</tbody>
</table>

9. Review the details of your Remote Backup job and click Finish.
Viewing the Details of a Remote Backup Job
1. On the Remote Backup screen, under Remote Backup Jobs, click the Details icon next to the job you’d like to view.
2. Review the Details screen and click Close.

Recovering a Remote Backup
Use the following steps to recover the data you saved on your remote server. This process recovers the data you saved on the remote server to your local server.
1. On the Remote Backup screen, under Remote Backup Jobs, click the Recover button next to the job you’d like to view.
2. On the Recover screen, click OK to confirm you want to recover your data. Your data recovery begins.

Deleting a Remote Backup
1. On the Remote Backup screen, under Remote Backup Jobs, click the Delete icon next to the job you’d like to delete.
2. In response to the confirmation message, click OK. The selected Remote Backup job is now deleted and removed from the Remote Backup Jobs list.

Internal Backups
Internal backups allow you to make backups of the existing content from one storage location to another on your My Cloud Mirror device.

Creating an Internal Backup
Use the following steps to back up your My Cloud Mirror internally.
1. On the navigation bar, click Backups to display the Backups screen.
2. Click Internal Backups.
3. Click Create Job.
4. Enter the following information to create an internal backup job:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Job Name</strong></td>
<td>Enter a Job Name for your backup.</td>
</tr>
<tr>
<td><strong>Source Folder</strong></td>
<td>Click <strong>Browse</strong> and select the folder you’d like to backup.</td>
</tr>
<tr>
<td><strong>Destination Folder</strong></td>
<td>Click <strong>Browse</strong> and select the destination folder for your backup.</td>
</tr>
<tr>
<td><strong>Backup Type</strong></td>
<td>Choose the backup type from the drop-down menu.</td>
</tr>
<tr>
<td></td>
<td>• Copy - Copies files from source to destination. Duplicate files will not be overwritten.</td>
</tr>
<tr>
<td></td>
<td>• Synchronize - Copies files from source to destination. Duplicate files WILL BE overwritten.</td>
</tr>
<tr>
<td></td>
<td>• Incremental - Copies incremental changes of files up to 25 copies to the destination.</td>
</tr>
<tr>
<td><strong>Recurrence</strong></td>
<td>If you’d like to use the Recurring Backup feature:</td>
</tr>
<tr>
<td></td>
<td>1. Click the toggle button to enable the Recurring Backup feature.</td>
</tr>
<tr>
<td></td>
<td>2. Select the frequency of the backup: Daily, Weekly, Monthly.</td>
</tr>
<tr>
<td></td>
<td>3. Select a time (hour and minutes) from the drop-down menu.</td>
</tr>
</tbody>
</table>

4. Click **Create**. Your completed job displays in the Internal Backup Jobs area.

**Initiating an Immediate Internal Backup**
- On the Internal Backups screen, under Internal Backup Jobs, select the job you’d like to immediately backup, and click the **Begin Now** icon.

**Modifying an Internal Backup Job**

1. On the Internal Backups screen, under Internal Backup Jobs, select the job you’d like to modify and click the **Edit** icon.

2. In the Modify Job screen, make the necessary changes to your job and click **Apply**.
Viewing Internal Backup Details

1. On the Internal Backups screen, under Internal Backup Jobs, select the job you’d like to modify and click the Details icon.

2. Review the details of your Internal Backup job and click Close.

Deleting an Internal Backup Job

1. On the Internal Backups screen, under Internal Backup Jobs, select the job you’d like to delete and click the Delete icon.

2. At the delete confirmation message, click OK. The selected Internal Backup job is now deleted and removed from the Internal Backup Jobs list.

Cloud Backups

A cloud backup allows you to create remote backups that are accessible over the Internet and through various mobile devices. My Cloud Mirror device uses the following cloud services to create remote backups:

- ElephantDrive: ElephantDrive is a cloud backup service that provides secure and automatic backups to your files remotely.
- Amazon S3: Amazon Simple Storage Service (S3) is an online file storage web service that can be used to store and retrieve any amount of data, at any time, from anywhere on the web.

Enabling ElephantDrive Cloud Backup

ElephantDrive is a cloud backup service that provides secure and automatic backups to your files remotely. Once enabled, ElephantDrive automatically syncs with your device. For additional information see http://home.elephantdrive.com/welcome/wdc/.

Use the following steps to enable a cloud backup using ElephantDrive.

1. On the navigation bar, click Backups to display the Backups screen.
2. Click **Cloud Backups**, if not already selected.

![Image of Cloud Backups](image)

3. Click **ElephantDrive** at the top of the screen.

4. In the ElephantDrive field, click the toggle button ![ON](image) to turn on your ElephantDrive cloud backup.

![Image of ElephantDrive toggle](image)

5. Click **Register**. The Register screen displays.

![Image of Register screen](image)

6. Enter the following information and click **Register**:
   - **Email address**: Enter the email address you’ll use to receive information from ElephantDrive.
   - **Password**: Enter a password for your new account
   - **Verify Password**: Reenter your password.

7. You’ve now enabled your ElephantDrive cloud backup.
Backing Up with ElephantDrive

Once you’ve enabled ElephantDrive, use the following steps to create a cloud backup.

1. On the navigation bar, click **Backups** to display the Backups screen.
2. Click **Cloud Backups**, if not already selected.
3. Click **Elephant Drive** at the top right of the screen.

4. In the Access Backups field, click **Login**.
5. Enter the email and password you used when you registered with ElephantDrive in **Step 6 on page 53**, and click **Login**.
6. In the Elephant Drive field, click the **New device backup wizard link**.
7. Follow the steps outlined in the ElephantDrive backup wizard to create your cloud backup.
Enabling an Amazon S3 Cloud Backup

**Note:** Before creating your Cloud backup, sign up for the Amazon S3 service at: [http://aws.amazon.com/s3](http://aws.amazon.com/s3).

Once your Amazon S3 account is set up, use the following steps to create a cloud backup.

1. On the navigation bar, click **Backups** to display the Backups screen.
2. Click **Cloud Backups**, if not already selected.
3. Click the **Amazon S3** button at the top of the screen.

4. Click **Create**.

5. Enter a Job Name for your cloud backup and click **Next**.

6. Enter the following information supplied by Amazon S3:
   - **Region:** Select the region used for your cloud from the drop-down menu.
   - **Access Key:** Enter the access key supplied to you by Amazon S3.
   - **Private Key:** Enter the private key supplied to you by Amazon S3.
**Remote Path**: Enter the remote path for your cloud. This is normally your bucket name.

7. Click **Next**.

8. Enter the following information and click **Next**:

<table>
<thead>
<tr>
<th>Type</th>
<th>Select one of the following options:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>Upload</strong>: Backs up your My Cloud Mirror data to your Amazon S3 bucket.</td>
</tr>
<tr>
<td></td>
<td><strong>Download</strong>: Backs up your Amazon S3 bucket to your My Cloud Mirror device.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Backup Type</th>
<th>From the drop-down menu, select the type of backup you’d like to perform. Options include:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>Overwriting existing file(s)</strong>: Overwrites files in the target folder that have the identical name as your source file.</td>
</tr>
<tr>
<td></td>
<td><strong>Full Backup</strong>: Creates a separate folder containing all of the backup data each time the backup is performed.</td>
</tr>
<tr>
<td></td>
<td><strong>Incremental Backup</strong>: Overwrites files with source files that are newer than the target files.</td>
</tr>
</tbody>
</table>

9. In the Local Path field, enter a path for your backup on your My Cloud Mirror server.
   - Click **Browse** to browse to a location for your backup on the device. (Example Volume_1/backup)

10. Click the toggle button to **ON** to activate the Autoupdate feature. This automatically updates your backup based on a schedule you create.
    - If you activate the Autoupdate feature:
      - Select the Autoupdate schedule: Daily, Weekly, or Monthly
      - Select the Autoupdate Time from the drop-down menu (Daily option).
    - Click **Next**.

11. If you don’t select Autoupdate, in the Backup Now field, indicate whether you want to begin the backup now.
    - Select **Yes** to begin your backup now.

12. Click **Next**.

13. Review your settings and click **Finish**.
    - Your Amazon S3 Cloud backup is created. The new job displays in the Amazon S3 Queue section of the Amazon S3 Backup page.

14. Access your Amazon S3 Cloud backup bucket to view your device backups.
Managing Apps on My Cloud Mirror

About Apps

Apps is short for Applications. Apps are little self-contained programs used to enhance the existing functions of your device or service. The My Cloud Mirror device provides various apps that allow you to use your device more productively.

Note: WD recommends that you fully understand the nature of any app before you install it on your device.

Note: Obtain support for each app through the individual vendor.

My Cloud Mirror comes with various apps installed. There is also a list of available apps for you to choose from on the Add an App screen.

Managing Apps

The Apps screen displays a list of the currently installed apps. From this screen, you can use your installed apps, add new apps, or remove apps you no longer want to use.

Viewing Apps

1. On the navigation bar, click Apps to display the Apps screen:

2. To select an app, click the name of the app in the left pane. The app displays in the right pane.
Adding an App

Use the following steps to add an app to your My Cloud Mirror device:

1. On the navigation bar, click **Apps** to display the Apps screen.
2. Click the **Add an App** icon in the lower left side of the screen.
   The first time you add an app, the Terms of Service screen displays. Read and accept the agreement.
3. On the Add an App screen, place a check next to the app you’d like to add to the device.

   ![Add an App screen]

4. For details about the app, click **Details**. Close the Details screen.
5. Place a check next to the app(s) you’d like to add to your device and click **Install**. The selected apps are added to your device.

Manually Adding an App

If you have an app you’d like to add that is not listed on the Add an App screen, use the following steps to manually add that app to your My Cloud Mirror device.

**Note:** WD recommends that you fully understand the nature of any app before you install it on your device.

1. On the navigation bar, click **Apps** to display the Apps screen.
2. Click the Add an App icon in the lower left side of the screen.

3. Scroll to the bottom of the Add an App screen and click the link, To install manually, click here.
4. Navigate to the app you’d like to install on your device, select the app, and click Open.
5. The selected app is added to your device.

Deleting an App

Use the following steps to delete an app from your My Cloud Mirror device.
1. On the navigation bar, click Apps to display the Apps screen.

2. From the Apps list in the left pane, select the app that you’d like to delete from the device.
3. Click the Remove an App icon in the lower left of the screen.
4. In response to the confirmation message, click OK. The app is removed from the device and no longer displays in the user account list.

Updating an App

Use the following steps to update an app that you’ve added to your My Cloud Mirror device.
1. On the navigation bar, click Apps to display the Apps screen.
2. If there is an update for one of the apps you’ve added to your device, an Updates available link displays at the top right of the screen.
3. Click the Updates Available link to display the Updates Available screen.
4. Select the app you’d like to update from the list and click Update.
   - If you’d like to view the details of the update, click Details.
   - Click Back to return to the Update screen.
Managing Storage on My Cloud Mirror

About Storage

The Storage page allows you to configure the storage within your device and view the status and capacity of its disks. This chapter provides details on managing the storage on your My Cloud Mirror device.

RAID Storage

RAID (Redundant Array of Independent Disks) allows you to store the same data in different places on multiple hard drives, providing necessary redundancy, greater performance, and data integrity. There are several different levels of RAID, each one providing a different method of sharing or distributing data among the drives. Your My Cloud Mirror device allows you to select from the following storage modes:

Note: The difference between a drive and a volume is that a volume can be a single drive or multiple drives.

<table>
<thead>
<tr>
<th>RAID Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>JBOD</td>
<td>The use of one or more drives not in a RAID configuration but managed as separate logical volumes.</td>
</tr>
<tr>
<td>Spanning</td>
<td>Combination of drives in a linear fashion to create one large logical volume.</td>
</tr>
<tr>
<td>RAID 0</td>
<td>RAID 0 mode provides disk striping across all drives in the RAID drive group. RAID 0 does not provide data redundancy but does provide the best performance of any RAID level. RAID 0 breaks up data into smaller segments and stripes the data segments across each drive in the drive group.</td>
</tr>
</tbody>
</table>
Viewing the Current RAID Mode

Use the following steps to view the RAID mode currently used on your device.

1. On the navigation bar, click **Storage** to display the Storage screen.
2. Click **RAID**, if not already selected.
3. In the RAID Profile, the following information displays:
   - RAID Health
   - Auto-Rebuild status (whether or not Auto Rebuild is turned on)
   - RAID Volume shows how many volumes the RAID or JBOD is configured for.

### RAID Mode

<table>
<thead>
<tr>
<th>RAID Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAID 1 (default)</td>
<td>In RAID 1 mode, the RAID controller duplicates all data from one drive to a second drive in the drive group. RAID 1 provides complete data redundancy but cuts the required storage capacity in half.</td>
</tr>
</tbody>
</table>

**WARNING!** Changes made to your RAID mode will delete all of your data and your user settings. See “Saving a Configuration File” on page 94 for information on saving your user settings.

Changing the RAID Mode

Use the following steps to change the current RAID mode on your My Cloud Mirror device.

1. On the navigation bar, click **Storage** to display the Storage screen.
2. Click **RAID**, if not already selected.
3. In the RAID Volume area at the bottom of the screen, click **Change RAID Mode**.
4. Review the Warning message and click **OK**.

![Warning Message]

5. Select the RAID mode you’d like to use for your My Cloud Mirror device.

![Change RAID Mode]

**RAID Modes include:**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>JBOD</td>
<td>The use of one or more drives not in a RAID configuration but managed as separate logical volumes.</td>
</tr>
<tr>
<td>Spanning</td>
<td>Combination of drives in a linear fashion to create one large logical volume.</td>
</tr>
<tr>
<td>RAID 0</td>
<td>Data is striped across multiple hard drives, enabling accelerated reading and recording of data by combining the work of two or more drives to increase performance.</td>
</tr>
<tr>
<td>RAID 1 (default)</td>
<td>Two instantaneous copies of the data are recorded on separate hard drives so if one of them fails, other(s) continue to read/write data until the faulty hard drive is replaced.</td>
</tr>
</tbody>
</table>

6. Select the **Switch to <RAID Mode>** check box and click **Next**.

7. Review the status of your hard drives and click **Next**.

![Change RAID Mode with Drive Status]
8. If the Volume slider displays, select the amount of space you’d like to dedicate to the selected RAID mode. The Volume slider displays for RAID1 (default).

If you choose not to use the entire volume for your RAID selection, you can configure the remaining disk space as Spanning by selecting the **Configure the remaining disk space as Spanning** check box.

9. Click **Next**. The next screen gives you the option to Enable Auto-Rebuild. For information about Auto-Rebuild see, “Auto-Rebuilding RAID” on page 64.

10. Select Auto-Rebuild ON of OFF and click **Next**.

11. Review the summary of your selections and click **Next**.
12. Review the warning screen and click **Finish**.
13. The requested hard drive changes begin. Do not turn off your My Cloud Mirror device while these changes are in progress.

14. When the process is complete, click **Close**.

**Auto-Rebuilding RAID**

The Auto-Rebuilding option allows you to automatically rebuild the RAID for your My Cloud Mirror device in case of drive corruption. Use the following steps to enable the auto-rebuild option.

1. On the navigation bar, click **Storage** to display the Storage screen.
2. Click **RAID**, if not already selected.
3. Review the **Auto-Rebuild** field to determine whether your My Cloud Mirror device is currently set up for auto-rebuild.

   ▪ If Auto-Rebuild is OFF (default), click the toggle button to enable Auto-Rebuild.
Disk Status

The Disk Status screen identifies the health of the disk drives as well as the status and information on each drive used in your My Cloud Mirror device. The Disk Status screen consists of the following areas:

- **Disks Profile**: This area displays the general status of all of the disk drives on your device.
- **System Disks**: This area identifies the drives on your device, the status of each drive, and the amount of space on that drive.

![Disk Status Screen](image)

**Note**: If a drive is not supported, the status is **not compatible**.

Viewing Hard Drive Information

Use the following steps to view status of the disks on your My Cloud Mirror device.

1. On the Storage page, click **Disk Status**, if not already selected.
2. Select **Drive <drive #>** next to the disk for which you’d like to view information.
3. The Hard Drive Information screen displays the following data.

![Hard Drive Information Screen](image)

**Hard drive information definitions.**

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vendor</td>
<td>The vendor from whom the hard drive was obtained.</td>
</tr>
<tr>
<td>Model</td>
<td>The model number of the hard drive selected.</td>
</tr>
<tr>
<td>Serial Number</td>
<td>The serial number of the hard drive selected.</td>
</tr>
<tr>
<td>Capacity</td>
<td>The capacity of the hard drive selected.</td>
</tr>
<tr>
<td>Firmware Version</td>
<td>The current firmware version used on the drive selected.</td>
</tr>
</tbody>
</table>
4. Review the hard drive information and click **Close**.
Playing/Streaming Videos, Photos, & Music

Media Servers

My Cloud Mirror is designed to serve as your home’s media server. It enables you to stream photos, music, and videos to your DLNA-compatible devices and music to your iTunes-compatible devices.

Both DLNA-compatible and iTunes-compatible devices search for media stored in any Public share that has media serving enabled. By default, DLNA Media is disabled. Once you enable it on the Settings > Media Server page, the media serving for the Public share is also automatically enabled. For all other shares, the media serving remains off.

If you do not want DLNA to display specific media files, place them in a private share that is set to disable media sharing. (See “Making a Share Private” on page 29.)

Media Server Overview

The My Cloud Mirror device uses TwonkyMedia as its DLNA media server. It streams your music, photos and videos to compatible devices in your home. Playing media on a compatible device is easy.

The media server searches for all the media stored in the Public share on the My Cloud Mirror device connected to your home network. After enabling media serving for the device (see “Enabling DLNA and iTunes” on page 69), you can just transfer your multimedia content to the Public share on your My Cloud Mirror device, and you are ready to stream and view content on your home entertainment center, game consoles (for example, Xbox 360® or PlayStation® 3), WD TV Live® media player, or DLNA® 1.5 digital media adapters), and other PC computers on your home or office network. Visit: http://www.dlna.org for further information on DLNA.

iTunes Overview

You or anyone connected to the My Cloud Mirror device can use iTunes to play stored music files. iTunes creates a virtual music library on the device and treats it as an iTunes repository, making it possible to stream music files from the My Cloud Mirror device to Windows or Mac computers running iTunes.

iTunes scans any shares that have the Media Serving setting enabled, including the Public share by default.
### Media Types Supported

</table>

**Note:** Some devices may not support playback of all these files. Please refer to your device’s user manual to see which formats are supported.
**Media Types Supported by iTunes**

*Note:* iTunes 10.4 or later only supports music files. See Knowledge Base Answer ID 8412 for additional information on iTunes-supported versions.

The iTunes Media Server supports the following file extensions: FLAC, M4A, MP3, MP4A and WAV.

*Note:* Some devices may not support playback of all these files. Please refer to your device’s user manual to see which formats are supported.

**Media Storage**

You can access and store media content on the My Cloud Mirror device by means of network shares. Shares, similar to folders or directories, are areas set up to organize media and access them from your network. Shares can be shared with everyone (public) or with selected users on your network (private).

The device comes pre-configured with the Public network share, which contains the following folders for media storage:

- **Shared Music**—Stores music files you want to share with other users.
- **Shared Pictures**—Stores image files you want to share with other users.
- **Shared Videos**—Stores video files you want to share with other users.

*Note:* You will notice that the Public share’s Shared Music and Shared Pictures shares contain mirrored and uploaded subfolders. These folders are needed by Twonky 7.2. You can now upload all media types to the uploaded subfolder from a DLNA client with “upload” capability.

Go to the Twonky configuration site (NAS_IP:9000) to aggregate content from all NAS devices with DLNA capability on your network to the mirrored folder. Uploading and mirroring are best left to expert users, as these features are not supported by WD customer support.

**Enabling DLNA and iTunes**

The Media page of the Settings Screen allows you to enable or disable the DLNA and iTunes media servers. Media server utilities for re-scanning the NAS or fully rebuilding the DLNA database are also on the Media page.

**Enabling DLNA**

1. On the Navigation bar, click **Settings** and in the left panel click **Media**.

   ![Settings Screen](image)

   The DLNA area displays the current version, the number of music, video, and pictures
available on your device, and when the last update occurred.

2. In the DLNA Media Server area, toggle the Media Streaming toggle to ON.
   
   **Note:** Media Streaming is OFF by default. The media server must be enabled before you can provide media serving for a share. (See “Creating a New Share” on page 28 for instructions on how to enable media serving on a share.)

3. Click **View Media Players** to display a list of the media players/receivers on your home network.
   
   **Note:** If Media Streaming is OFF, this field does not display on your screen.

4. On the Media Streaming Options screen, select the media device you’d like to receive streaming music, video, or photos.

   ![Media Streaming Options](image)

   - **ON:** Select this option to allow DLNA media streaming to the device.
   - **OFF:** Select this option to disable DLNA media streaming to the device.

5. Once your selections are made, click **Close**.

**Rescanning/Rebuilding the DLNA Database**

The My Cloud Mirror device automatically rescans and rebuilds the DLNA database; however, if you suspect that your database is corrupted, use the following steps to either rescan or rebuild your DLNA database:

**Important:** Use caution when completing this procedure. Rebuilding the DLNA server database could take a considerable amount of time, depending on the number and size of the files involved.

1. On the Navigation bar, click **Settings** and then click **Media** in the left panel.
2. In the DLNA Database field, click one of the following.
   
   - **Rescan:** The My Cloud Mirror device searches for changes made to your media libraries. Try this option first.
   - **Rebuild:** The My Cloud Mirror device rebuilds the DLNA database from scratch.
Enabling iTunes

1. On the Navigation bar, click **Settings** and then click **Media** in the left panel.

![iTunes Settings](image)

2. In the iTunes area, click the toggle button to enable iTunes (if not already enabled).
   
   **Note:** iTunes is ON by default. To disable it, click the toggle button to OFF.

3. To configure Advanced Options, click **Advanced Options**.

![Advanced Options](image)

4. In the Password field, enter a password to be used when accessing your My Cloud Mirror device on iTunes.
   
   **Note:** Leave the Password field blank if you don’t want to use a password to access your device media in iTunes.

5. For Auto Refresh, select the frequency of the media refresh for iTunes from the drop-down menu.

6. Click **Apply** to save your settings.

Refreshing iTunes

Use the following steps to refresh the iTunes directory. This allows iTunes to pick up any new media.

1. On the Navigation bar, click **Settings** and then click **Media** in the left panel.
2. In the iTunes database field, click **Refresh**.
Adding Media Content to the Folders

1. Open Windows Explorer or Mac Finder.

2. Copy your music files to the Shared Music folder.

3. Follow the same process to place your videos and pictures into their respective Pictures and Video folders.
Accessing Your Personal Cloud Using Media Players

Now that you have copied your files to one of the Shared folders, you can use a variety of media players to stream media. The following types are supported:

- WD TV Live MediaPlayers
- Windows Media Player 11 (comes with Windows Vista)
- Windows Media Player 12 (comes with Windows 7 and Windows 8)
- Xbox 360
- PlayStation 3
- Other media players:
  - BluRay Players
  - Network Connected TVs
  - Digital Picture Frames
  - Network Music Player
- DLNA Devices

Note: For specific information on using and updating the media player, go to the appropriate support site.

WD Media Players

You can connect the various WD TV and WD Media Players to your home network for access to media content stored in a network drive such as the My Cloud Mirror device. For details on using a WD Media Player to access files on your device, see Knowledge Base Answer ID 2676 or refer to your WD Media Player User Guide.

Other Media Players

Following are general steps for setting up devices such as digital picture frames, Blu Ray players, network-connected TVs, and digital media adapters:

1. Make sure that your My Cloud Mirror device is connected to your home’s local network and is powered on.
2. Follow the user instructions provided with your media player to proceed through any initial setup or installation of drivers.
3. Using the navigation feature on your player, scan and detect your My Cloud Mirror device on your network.
4. Depending on the player you have, you may need to access a Settings/Network Setup page in the user interface to establish connection so that your player can link to your My Cloud Mirror device. Please refer to your player’s user guide for specific instructions.
DLNA Devices

See specific DLNA media device user manuals for instructions on connecting a DLNA device to your local area network so you can access content on the My Cloud Mirror device. Go to http://www.dlna.org for a list of DLNA-certified devices and for further information.

Accessing Your Personal Cloud Using iTunes

You or anyone connected to the My Cloud Mirror device can use iTunes to play stored music files. This service creates a virtual music library on the device and treats it as an iTunes repository, making it possible to stream music files from the My Cloud Mirror device to Windows or Mac computers running iTunes. For a list of supported media types, see “Media Types Supported” on page 68.

Note: iTunes 10.4 or later only supports music files. See Knowledge Base Answer ID 8412 for additional information on iTunes supported versions.

Note: iTunes scans any shares that have the Media Serving setting enabled, including the Public share by default.

You can drag and drop media files into the corresponding folders in the Public share (e.g., music files into the WDMyCloudMirror/Public/Shared Music default share).

Streaming Media in iTunes

iTunes is enabled by default in the dashboard. See “Enabling iTunes” on page 71 for more information on configuring iTunes.

1. Launch iTunes on your computer.
2. Click WDMyCloudMirror under the Shared section of the left pane. If you have copied music to the /Public/Shared Music folder or a video to/Public/Shared Videos, and it is in a format supported by iTunes, it is listed in the right pane.
3. Double-click a media file you’d like to play.
Configuring Settings

The Settings option on the navigation bar allows the Administrator to view and customize the My Cloud Mirror device’s system, network, media, utilities, notifications, and firmware settings. This chapter explains how to configure the various settings for your My Cloud Mirror device.

**General**

On the General page you can:

- View and modify the device name and description
- Select the language in which the web pages should display
- Set the date, time, and time zone for the device
- Enable cloud access for your device
- Set energy saving options
- Enable and configure Time Machine backups for your Mac
- Enable various services for your device

**WARNING!** Renaming the My Cloud Mirror device forces all the network computers to remap their shared network resources. Change the device name only when necessary.
Accessing the General Screen

On the Navigation bar, click **Settings**. The General page displays:
Device Profile

1. In the Device Profile section of the General page, view or modify the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Name</td>
<td>Enter a unique name for your device to identify it on the network. The device name can be up to 15 characters long and can not include special characters (e.g., @, #, $ etc.).</td>
</tr>
<tr>
<td>Device Description</td>
<td>The default description is WDMyCloudMirror. If desired, enter a different description for your device. The device description can be up to 32 characters long and can not include special characters (e.g., @, #, $ etc.).</td>
</tr>
<tr>
<td>Serial Number</td>
<td>Displays the WD-assigned number that identifies the specific unit. This field can not be updated.</td>
</tr>
</tbody>
</table>

2. If you made any changes, click Save (appears next to the updated field once a change is made).

   **Note:** Throughout the My Cloud Mirror dashboard, the Save and Cancel buttons display only if you make changes.

Language and Clock

In this section of the General screen, you can change the language that displays in the My Cloud Mirror device’s interface and set the date and time. The date and time are synchronized to the NTP (Network Time Protocol) server by default. You have the option of setting the date and time manually or allowing the NTP to access the Internet and automatically set the time. If you are not connected to the Internet, you must enter the date and time manually.
1. In the Language & Clock section, view or modify the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Language</td>
<td>From the drop-down list, select the language you’d like to display on your My Cloud Mirror Cloud Storage web pages. The default language is English.</td>
</tr>
<tr>
<td>Time Zone</td>
<td>From the drop-down list, select the time zone where your device is located.</td>
</tr>
<tr>
<td>NTP Service</td>
<td>Enable or disable NTP service, which automatically synchronizes your device to update the time and date. A dialog box displays current NTP servers. You can add another NTP server if you choose.</td>
</tr>
<tr>
<td>Primary Server</td>
<td>Change the primary server used for your NTP service.</td>
</tr>
<tr>
<td></td>
<td>• To change the primary server used for your NTP service, click <strong>Configure</strong>.</td>
</tr>
<tr>
<td></td>
<td>• Click <strong>Add User NTP</strong> and enter the URL address of the new primary server.</td>
</tr>
<tr>
<td></td>
<td>• Click <strong>Save</strong>.</td>
</tr>
<tr>
<td>Date &amp; Time</td>
<td>Displays the device date and time. This information is synchronized to the NTP (network time protocol) server by default.</td>
</tr>
<tr>
<td>Time Format</td>
<td>From the drop-down list, select <strong>12</strong> (12-hour clock) or <strong>24</strong> (24-hour clock).</td>
</tr>
</tbody>
</table>

2. Click **Save** for each change you make.
Cloud Access

Use the following steps to turn cloud access On or Off, and configure it for all users (i.e., control whether computers and mobile devices can access the content on the My Cloud Mirror device).

**Note:** This action turns on cloud access for the entire device. To turn on access for an individual user, see “Configuring Cloud Access for a User” on page 14.

2. In the Cloud Service field, ensure that the toggle button is set to ON (default). The Connection Status changes to Connected (Relay connection established).

3. Click **Configure** to change the type of connection you use for your cloud access, or to rebuild the content database.

   On the Cloud Access Connection Options screen, there are three access options:
   - **Auto:** Auto uses uPnP to attempt to open ports on your router. If successful, a direct connection is established between your device and your apps.
   - **Manual:** Establishes a connection through the two selected ports. If either port is unavailable, a relay connection is established. A manual router configuration is required for this option. See Knowledge Base Answer ID 8526 for information on how to set up your router for manual setup.
   - **Win XP:** Establishes a connection through ports 80 and 443. If these ports are unavailable, a relay connection is established. This option is required if you’re using Windows XP.

   **Note:** By default, the My Cloud Mirror device automatically establishes a direct connection between your mobile devices and router.

4. Select a connection type:
   - **Auto:** Click **Auto**.
   - **Manual:** Click **Manual** and enter the External Port 1 (HTTP) and External Port 2 (HTTPS) numbers.
   - **Win XP:** Click **Win XP**.

5. Click **Apply**.

6. In the Dashboard Cloud Access field, click the toggle button to turn on remote access to the dashboard.

   **Note:** Selecting this option allows you to perform administrator functions remotely.
7. Review the information on the screen, then enter and reenter a password for your administrator account. Click **Apply**.

   - If your administrator account already has a password associated with it, review the Dashboard Cloud Access screen and click **Save**.

   **Note:** If you set your Cloud Setting to Manual, you will have to access your device remotely using the ports you selected during the manual cloud setup.

   *Example: If you set up your manual HTTP port as 5040, you’d use the following address to access your device: http://<Device IP Address>:5040.*

---

**Energy Saver**

The Energy Saver fields allow you to reduce the energy required to run your My Cloud Mirror device. Use the following information to configure the energy saving options on your My Cloud Mirror device.

![Energy Saver](image)

View or change the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Drive Sleep</strong></td>
<td>Enabling this function allows the hard drives to go into standby mode to save power after a designated period of inactivity. Drive Sleep is enabled to sleep after approximately 10 minutes by default.</td>
</tr>
<tr>
<td></td>
<td>• To enable/disable Drive Sleep, click the toggle button.</td>
</tr>
<tr>
<td><strong>LED</strong></td>
<td>Enabling this function allows the device LEDs to go into standby mode to save power. LED is enabled by default.</td>
</tr>
<tr>
<td></td>
<td>• To enable/disable LED, click the toggle button.</td>
</tr>
<tr>
<td><strong>Web Access Timeout</strong></td>
<td>Shows the current timeout set for web access to the device.</td>
</tr>
</tbody>
</table>

### Power Recovery
Automatically restarts your device from a previously unexpected shutdown due to power failure. Power Recovery is enabled by default.

<table>
<thead>
<tr>
<th>Note: If you disable this feature, your device will not automatically power on after an unexpected shutdown.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- To enable/disable Power Recovery, click the toggle button.</td>
</tr>
</tbody>
</table>

### Power Schedule
The Power Schedule allows you to schedule shutdowns for your My Cloud Mirror device.

1. To enable Power Schedule, click the toggle button.
2. Click **Configure**.
3. Use the slider bar to configure the start and stop times for your device.
4. Click **** to shut down the device for 24-hours.
5. Click **Save**.

| Note: You can use WD Access to wake up the system. For information and to download this app go to WD's online Learning Center. |

### Web Access Timeout
Automatically logs you out of the system after a designated amount of time.

- From the Web Access Timeout drop-down menu, select an amount of time you’d like to use for your system timeout. The system updates automatically.

---

**Mac Backups**

This section of the General screen enables or disables Time Machine backups of Mac computers.

**Important:** You must set a password for your Administrator account in order to restore your Time Machine backups.
To configure backup settings:

1. In the Mac Backups area, click the toggle button to enable Time Machine backups if not previously enabled.

2. Click the Configure link to display the Time Machine Settings dialog.

3. From the Select a Share drop-down list, select a share you’d like to use to back up your Mac data.

4. Click Save.

**Important:** Once Time Machine begins to back up your files to a selected share, we recommend that you continue to back up to that share. Switching shares generates a new backup file which will not contain your previously saved information.

Service

This section of the General screen enables or disables the Recycle service available on your My Cloud Mirror device.

1. Click the Configure link to display the Recycle Bin Settings.

2. If you want the recycle bin to automatically be cleared after a set number of days, click the Auto Clear Recycle Bin toggle button to ON.

3. In the File Retention Time box, type the number of days you want files to be retained before they’re deleted, and click Save.
Network

The **Network** screen displays the device’s MAC and IP addresses and allows you to set network options such as FTP access, remote servers, and workgroups.
Network Profile

The Network Profile section of the Network screen displays network information for the My Cloud Mirror device.

<table>
<thead>
<tr>
<th>Network Profile</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
</tr>
<tr>
<td>Mac Address</td>
</tr>
<tr>
<td>IPv4 IP Address</td>
</tr>
<tr>
<td>IPv4 DNS Server</td>
</tr>
</tbody>
</table>

The Network Profile section displays the following information:

<table>
<thead>
<tr>
<th>MAC Address</th>
<th>The Media Access Control (MAC) address for this device.</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv4 IP Address</td>
<td>The IP version 4 address for this device.</td>
</tr>
</tbody>
</table>

Network Services

The Network Services section of the Network screen allows you to enable or disable the services available on your My Cloud Mirror device.

<table>
<thead>
<tr>
<th>Network Services</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv4 Network Mode</td>
</tr>
<tr>
<td>Link Speed</td>
</tr>
<tr>
<td>Jumbo Frame</td>
</tr>
<tr>
<td>FTP Access</td>
</tr>
<tr>
<td>AFP Service</td>
</tr>
<tr>
<td>NFS Service</td>
</tr>
<tr>
<td>WebDAV Service</td>
</tr>
<tr>
<td>SSH</td>
</tr>
<tr>
<td>Dynamic DNS</td>
</tr>
</tbody>
</table>
1. Review or update the following:

<table>
<thead>
<tr>
<th>IPv4 Network Mode</th>
<th>By default, the network mode is set to DHCP, which means the My Cloud Mirror device automatically gets the IP address and other settings from your network. Select the method of assigning the device’s unique IPv4 address:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Static:</td>
<td>Static IP lets you set an IP address manually. You will be prompted for IP Address, Subnet mask, Gateway IP address, and DNS Server. (If you don’t know this information, please check your router settings.)</td>
</tr>
<tr>
<td>DHCP:</td>
<td>DHCP Client causes the My Cloud Mirror device to obtain an IP address and associated settings automatically from the local DHCP server.</td>
</tr>
</tbody>
</table>

*Note:* When configuring Static or DHCP, record your Subnet mask, Gateway IP address, and DNS Server in a safe location for future reference. This information will not be displayed once it is entered into the My Cloud Mirror server.

<table>
<thead>
<tr>
<th>Link Speed</th>
<th>Select the link speed for your network from the drop-down menu and click <strong>Save</strong>. Options Include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto</td>
<td></td>
</tr>
<tr>
<td>100</td>
<td></td>
</tr>
<tr>
<td>1000</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Jumbo Frame</th>
<th>Jumbo frames are large IP frames used to increase performance over supported networks. Select the Jumbo Frame for your network from the drop-down menu and click <strong>Save</strong>.</th>
</tr>
</thead>
</table>

*Note:* All devices on your network (e.g., router, computer) must support and be configured for this option in order to maximize performance.
FTP Access

File Transfer Protocol enables the transfer of data from one computer to another through a network. FTP is disabled by default.

1. To enable FTP Access, click the toggle button to on.
2. Click **Configure**.
3. On the FTP Settings screen, enter the following information:
   - **Maximum Users**: From the drop-down menu, select the maximum number of users you’d like to have FTP access.
   - **Idle Time**: Enter the amount of time, in minutes, you’d like the FTP to be idle before it times out.
   - **Port**: Enter the port to be used for FTP access.
   - **Flow Control**: Select either Unlimited or Customize. If you select Customize, enter a Flow Control value.
4. Click **Next**.
5. In the **Passive Mode** field, select either Default or Customize. If you select Customize, enter Passive Mode values.
6. Select the check box if you’d like to report external IP in PASV mode and click **Next**.
7. Enter the following information:
   - **Client Language**: Select the client language from the drop-down menu.
   - **SSL/TLS**: Select this check box if you’d like to allow only SSL/TLS connections.
   - **FXP**: To enable FXP, click the toggle button to ON.
8. Click **Next**.
9. Enter all IP addresses that you’d like to block from FTP access and select either Permanent or Temporary from the drop-down menu. Click **Save** to save your entries.
10. Click **Finish**.

AFP Service

Apple File Protocol. AFP Service is automatically enabled if you are set up for Time Machine backups.

- To enable/disable AFP Service, click the toggle button .

**WARNING!** Mounting or ejecting a USB drive while performing an NFS or AFP file transfer will interrupt the file transfer process.

NFS Service

Network File System. Select this option to enable NFS Service for your network.

- To enable/disable NFS Service, click the toggle button .

**WARNING!** Mounting or ejecting a USB drive while performing an NFS or AFP file transfer will interrupt the file transfer process.

WebDAV Service

Web Distributed Authoring and Versioning (WebDAV). Select this option to enable WebDAV service for your network.

- To enable/disable WebDAV Service, click the toggle button .

**Note:** In order to connect to the WebDAV service, use the following IP address: http://<server ip address>:8080/Public
## Network UPS

An Uninterruptible Power Supply (UPS) is a device that works off of a battery and keeps devices that are connected to the UPS port running for at least a short time if the main power source goes out. When a My Cloud Mirror device is connected via USB to the network drive the drive will automatically shut down when the UPS is drained to a specified percentage.

Communication with the My Cloud Mirror device is done using a master/slave protocol in which the master device controls the slave devices.

When the UPS is connected to the My Cloud Mirror device by the USB, the device automatically becomes a UPS Network Master. Other My Cloud devices that are connected to that UPS can be pointed to the IP address of the UPS Master. If the UPS is discharged to the specified percentage, all of the My Cloud Mirror slave drives will automatically shut down properly.

To set up network UPS:

1. Click the Slave toggle button to ON. The Network UPS Slave mode screen displays.
2. Enter the IP address of the UPS master. An “in progress” screen displays and when the setting is updated, the Network screen displays with Network UPS Slave set to OFF.
Windows Services

The Network Workgroup section of the Network screen allows you to enable or disable the workgroup options available on your My Cloud Mirror device.

### Workgroup

The Workgroup feature allows devices in the same workgroup to access one another. This option is only available for Windows operating systems. Each time you add a device to your network, assign it the same workgroup name to enable access.

1. In the Workgroup file, enter the name of the workgroup for your network.
2. Click **Save**.

### Local Master Browser

The Local Master Browser feature allows you to collect and record resource and/or service information across multiple locations.

- To enable/disable the Local Master Browser, click the toggle button.

### Max SMB Protocol

The Max SMB Protocol feature allows you to select the maximum Server Message Block (SMB) protocol you’d like to use for your device.

- Select the Max SMB Protocol from the pull-down menu.

### LLTD (Link Layer Topology Discovery)

The LLTD protocol option provides enhanced discovery and diagnostics on Microsoft Windows machines.

- To enable/disable the LLTD feature, click the toggle button.
Remote Server

The Remote Server section of the Network screen allows you to enable your My Cloud Mirror device to act as a remote server, allowing you to back up shares from another My Cloud Mirror on the local LAN or WAN.

![Remote Server](image)

**Note:** To see your My Cloud Mirror device over the Internet, ensure that you’ve added port forwarding rules for both SSH and Remote Backup services (“Port Forwarding” on page 89).

To enable Remote Server:
1. Click the toggle button to ON.
2. Click Configure. The Remote Server screen displays:
3. In the Password field, enter a password to be used to access remote backups for this device to a remote server.
4. Click Save.
5. Review the SSH information and click the I accept check box.
6. Create a password for SSH login and then click OK.

Port Forwarding

The Port Forwarding section of the Network screen allows you to manage your connections to particular services by assigning default or custom port numbers.

For additional information on Port Forwarding, see Knowledge Base Answer ID 10649.

Adding Port Forwarding Services

The Port Forwarding section of the Network screen allows you to manage your connections to particular services by assigning default or custom port numbers.

![Port Forwarding](image)

1. Click Add to add port forwarding service(s) to your My Cloud Mirror device.
2. On the Port Forwarding Settings screen, click either Select the default service scan or the Customize a port forwarding service and click Next.
   - If you selected Select the default service scan: Select the default service scan you’d like to use for port forwarding and click Finish.
   - If you selected Customize a port forwarding service, complete the following fields, and click Finish.
     - **Service:** Enter a service for your port forwarding.
     - **Protocol:** Select a protocol from the drop-down menu.
**External Port**: Enter an external port number for your port forwarding.

**Internal Port**: Enter the internal port number for your port forwarding

When all fields have been completed, click **Finish**.

### Modifying Port Forwarding Services
1. Click **Details** next to the port forwarding service you’d like to modify.
2. Make all necessary changes and click **Finish**.

### Deleting Port Forwarding Services
1. Click **Details** next to the port forwarding service you’d like to delete.
2. Click **Delete**. Your Port Forwarding service is deleted and removed from the Port Forwarding list.

### Media

On the Media screen, you can enter DLNA (Digital Living Network Alliance) media server and iTunes media player settings so that you can enjoy media in every room in your house.

1. On the Navigation bar, click the **Settings** icon and then click **Media** in the left panel.

   **Note**: DLNA and iTunes only work on your local network.

2. For instructions on entering media settings on this page and then displaying or streaming media, see “Playing/Streaming Videos, Photos, & Music” on page 67.
Utilities

On the Utilities page, you can test the My Cloud Mirror device and get diagnostic information, restore the device to factory defaults, reboot or shut down the device, and import or export a configuration file.

To access the Utilities screen, click the Settings icon and then click Utilities in the left pane.
System Diagnostics

Run diagnostic tests if you are having problems with your device. You can also view your system logs, and enable extended logging and Flash System LED for your device.

Diagnostic Tests

There are three types of diagnostic tests:

- **Quick Test**: The quick test checks the hard drives for major performance problems. The result of a quick test is a pass or fail evaluation of the hard drive’s condition. The quick test can take several minutes to complete.

- **Full Test**: The full test is a more comprehensive drive diagnostic. It methodically tests each and every sector of the hard drives. You will be informed of the condition of the hard drive once the test is performed. The full test may take hours to complete, depending on the size and data configuration of the hard drives.

- **System Test**: The system test reviews the health of your device hardware (hard drives, fan, system clock, and device temperature).

Running a Diagnostic Test

1. On the Utilities page, click **Quick Test**, **Full Test**, or **System Test**. A progress bar displays, indicating test progress and whether the device passed or failed the test.
2. Review the test results and click **Close**.
   - If the device fails the test, click ![Support](image) and then click **Support** to get assistance.

Viewing System Logs

System logs provide a list of the events occurring on your device. Use the following steps to view your system logs.

1. In the Diagnostics area, click **View Logs**.
2. On the View Logs dialog, review the device log entries. To customize the log:
   - Select the Log Level from the pull-down menu.
   - Select the Filter By option from the pull-down menu.
   - To clear the log, click **Clear**.
3. Once you’ve reviewed the log click **Close**.

Extended Logging

To capture extended logs in your diagnostics, ensure that there are no backups, file activity, or file transfers being performed prior to extending your logging capability.

- Click the toggle button to turn on extended logging, then click **OK**.

Flash System LED
To enable Flash System LED, click the toggle button.

**Restore to Default**

The Restore to Default utility allows the Administrator to perform a restore on the My Cloud Mirror device.

The following restore options are available:

- **System Only**: Reverts system settings to the original factory default values, but retains user data and shares.
- **Quick Restore**: Reverts all settings to the factory default values, erases all user data and shares, and retains default shares. Quick Restore creates a new file table on the device, but does not fully overwrite or erase the drive, so data recovery programs can be used to restore user data and shares.
- **Full Restore**: Reverts all settings to their default values, deletes all user data and shares permanently, and retains default shares. Data recovery programs cannot be used to restore data; all user data and shares, with the exception of the default shares, are permanently deleted.

**Important**: Before doing a factory restore or a system update, you may choose to save your device’s current configuration. At a later time, you can import a previously saved configuration. Keep in mind that importing a configuration after restoring factory defaults does not restore shares or users. See “Saving a Configuration File” on page 94,” to create or restore a configuration file.

**Note**: To erase all of the data on your device, see “Format Disk” on page 95.

**Restoring your System**

Use the following steps to restore your system to one of the three available options.

1. In the Restore to Default area, click either **System Only**, **Quick Restore**, or **Full Restore**.
2. Click **Restore**.
3. Review the confirmation message and click **OK**. The device reboots. Don’t unplug the device during this rebooting process. Once the reboot is complete, launch the dashboard.

**System Configuration**

The system configuration area allows you to save a configuration file or import an existing configuration file. This is useful if you perform a system restore and want to maintain your current configurations.
Saving a Configuration File
Use the following steps to save a configuration file.
1. In the System Configuration area, click **Save Config File**.
2. The configuration file saves to your desktop.

Importing a Configuration File
Use the following steps to save a configuration file.
1. In the System Configuration area, click **Import File**.
2. Navigate to the location of your saved configuration file and select it. The configuration file is loaded. The device reboots. Don’t unplug the device during this rebooting process. Once the reboot is complete, launch the dashboard.

Device Maintenance
The Device Maintenance area allows you to shut down and reboot your My Cloud Mirror device. This area also displays the amount of time the device has been up and running.

Shutting down the Device
Use the following steps to safely shut down your My Cloud Mirror device.
1. In the Device Maintenance area, click **Shutdown**.
2. Review the confirmation message and then click **OK**. Your My Cloud Mirror safely shuts down.

Rebooting the Device
1. In the Device Maintenance area, click **Reboot**.
2. Review the confirmation message and then click **OK**. Your My Cloud Mirror safely reboots.

Scan Disk
The Scan Disk area allows you to scan your device’s hard disks for any errors.

Scanning Your Disk
Use the following steps to run a disk scan on your My Cloud Mirror device.
1. In the Scan Disk area, select the volume you’d like to scan from the drop-down menu.
2. Click **Scan Disk**.
3. Review the confirmation message and click **OK**. Your My Cloud Mirror is scanned for disk errors.

## Format Disk

The Format Disk area allows you to format your device’s hard disks.

### Formatting Your Disk

**WARNING!** The Format Disk option erases all of the user data and shares permanently, retaining default shares. Data recovery programs cannot be used to restore data; all user data and shares are permanently deleted.

Formatting your disk will take several hours to complete.

Use the following steps to format the disks on your My Cloud Mirror device.

1. In the Format Disk area, select the volume you’d like to format from the drop-down menu.
2. Click **Format Disk**.
3. Review the confirmation message, select the check box, and click **OK**. Your My Cloud Mirror is formatted.

## About ISO Mount

Mounting an ISO file located on your network shares provides file-level access to the file and folder content of the ISO file to users with access to the network share. Use this area to create and ISO image or ISO share.

### Creating an ISO Image

An ISO image is a file that is an exact copy of an existing file system. Use the following steps to create an ISO image.

1. On the Navigation bar, click the **Settings** icon and click **Utilities** on the left pane.
2. At the bottom of the Utilities screen, click **Create ISO Image**.
3. In the Image Size field, select the image size you’d like to use for your ISO image from the pull-down list.
4. In the Image Path field, enter the path for the data you’d like to image or click Browse, select the folder you’d like to image and then click OK.
5. In the Image Name field, enter a name for your ISO image.
6. Click Next.

7. In the Select field, click one of the following:
   - **Overwrite**: When overwrite is selected, files with the same name will be overwritten.
   - **Skip**: When skip is selected, files with the same name will not be skipped.
8. Select the folders and files you’d like to add to your image file in the left column and then click Add>>.
9. Select the folders and files that you’d like to remove from the ISO image and then click <<Remove.
10. Click Next. Your ISO image is created.
11. Click Finish.

### Creating an ISO Share

Use the following steps to create an ISO share.

1. On the Navigation bar, click the Settings icon and click Utilities on the left pane.
2. At the bottom of the Utilities screen, click Create ISO Share.

3. Click the folder, or sub folder, where you want to add the ISO share.
4. To create a new folder, click the + New icon.
5. In the Create a New Folder screen that opens, type a name for the new folder, and click OK. The new folder is created and shown on the Create ISO Share screen.
6. Click Next.
7. Enter a description for your ISO share and click Next.
8. Complete the following fields:
   - **Enable Media Serving:** To enable Media server for the ISO Share, click the toggle button 
   - **FTP Access:** To enable FTP Access for the ISO Share, click the toggle button 
   - **WebDAV Access:** To enable WebDAV Access for the ISO Share, click the toggle button 

   **Note:** If FTP Access or WebDAV access are disabled for the device, the FTP Access and WebDAV Access fields will be grayed out.

9. Click Next.
10. If you want to enable NFS Access for the ISO Share, click the toggle button 

    **Note:** If NFS Access is disabled for the device, the NFS Access fields will be grayed out.

11. Click Save. Your ISO Share is created.

**Viewing the Details of an ISO Share**

Use the following steps to modify an ISO share.

1. On the ISO Mount screen, select the Details icon next to the ISO Share that you’d like to view.
2. Review the ISO Share details and click Close.

**Modifying an ISO Share**

Use the following steps to modify an ISO share.

1. On the ISO Mount screen, select next to the ISO Share that you’d like to modify.
2. Select the share to edit and click Next.
3. Complete the following fields:
• **Enable Media Serving**: To enable Media server for the ISO Share, click the toggle button.

• **FTP Access**: To enable FTP Access for the ISO Share, click the toggle button.

• **WebDAV Access**: To enable WebDAV Access for the ISO Share, click the toggle button.

  **Note**: If FTP Access or WebDAV access are disabled for the device, the FTP Access and WebDAV Access fields will be grayed out.

4. Click **Next**. The Edit ISO Share screen appears.

5. Click the toggle button to enable or disable NFS Access for the ISO Share.

  **Note**: If NFS Access is disabled for the device, the NFS Access fields will be grayed out.

6. Click **Apply**.

Delete an ISO Share

Use the following steps to delete an ISO share.

1. On the ISO Mount screen, select next to the ISO Share that you’d like to delete.

2. Review the confirmation message and click **OK**. The ISO Share is deleted and removed from the ISO Share List.

Notifications

The My Cloud Mirror device provides notifications about various events, such as firmware updates, the success of firmware installations, and system shutdowns. Notifications display in the Alert area at the top of the screen and are also available by email, depending on how your device is configured (for additional information on Alerts, see “Managing Alerts” on page 41).

The Notification page allows you to set up email addresses for up to five users who will receive notifications, set up SMS alert messages for mobile devices, and set the level of alert for which you will be notified.
Notifications Email

The Notification Email area allows you to set up email alerts and SMS notifications for specified users.

### Enabling Email Alerts
1. On the Navigation bar, click the Settings icon and click Notifications on the left pane.
2. To enable Alert emails, click the toggle button to on.
3. Click Configure.
4. On the Alert Notification screen, use the slider bar to select the level of alerts you’d like to receive by email:
   - **Critical Only**: Send only critical alerts to the specified email address.
   - **Critical and Warning**: Send both critical and warning alerts to the specified email address.
   - **All**: Send all alerts (Informational, Critical, Warning) to the specified email address.
5. Click New Email.
6. Enter the email address where you’d like to receive alert emails and click Save.
7. Repeat steps 5 - 6 to enter up to 5 email addresses.
8. Click Send Test Email to validate the email addresses you entered.
9. Click OK and then check your email for a validation email.

### Enabling SMS Notifications

**Note:** Check with your SMS service provider to obtain their requirements for sending SMS messages. Certain carriers may require you to send SMS/text messages by email.

1. On the Navigation bar, click the Settings icon and click Notifications from the left pane.
2. To enable SMS, click the toggle button.
3. Click Configure.
4. On the SMS Settings screen, enter the name of your SMS provider.
5. Enter the SMS URL with the message content set to be “Hello world”

   **Note:** This SMS URL is used only for setup. No SMS message will be sent after setup is completed. Obtain the URL format requirements from your SMS service provider. They should contain the following parameters: username, password, destination phone, and message content.

6. Click Next.
7. Select the corresponding category for each SMS parameter from the drop-down menu.
8. Click Finish. Your SMS notification is now set up.
Notification Display

The Notification Display allows you to select the type of notifications that are sent to you.

1. On the Notification Display screen, using the slider bar, select the level of notifications you’d like to view:
   - **Critical Only**: Send only critical alerts.
   - **Critical and Warning**: Send both critical and warning alerts.
   - **All**: Send all alerts (Informational, Critical, Warning).

   The system automatically updates with your selection.

Firmware Update

The Firmware Update page allows you to set up the device to update the My Cloud Mirror firmware automatically or to manually check for an update file. The current version number and the date of last update of the firmware also display on this screen.

Auto Update

Auto Update allows you to schedule your My Cloud Mirror device to conveniently check for available software updates and install them automatically. This is the easiest way of ensuring the My Cloud Mirror firmware is current.

   **Note:** After a firmware update installs, the My Cloud Mirror device reboots. Since a reboot affects users’ ability to access the cloud, schedule the updates to
occur at times when the likelihood of users accessing the cloud are minimal.

Note: If you enable Auto Update, you are asked to manually reboot your system when the update is completed.

Updating Firmware Automatically
1. To enable Auto Update, click the toggle button to ON.
2. In the Update Schedule field, from the drop-down lists, specify the frequency (e.g., daily) and the time at which the device should look for an update on the WD website.
3. Click Save.
   Once saved, your device will check for firmware updates at the specified time and day. If an update is available, it will automatically install and prompt you for a reboot.

Available Updates
You can check for available updates at any time in the Available Updates area. This area also displays the current version of the firmware and indicates when the last firmware update was made.

Checking for Updates
1. In the New Firmware field, click Check for Updates.
2. Review the Update Firmware screen and click OK.
   • If an update is available, click Install and Reboot.

Manual Update
Follow this procedure to perform a manual update.

Note: Ensure that you’ve downloaded the firmware file you need to install on your device from the WD Tech Support Downloads page at http://support.wd.com/product/download.asp.

Manually Installing an Update
1. In the Manual Update section, click **Update from File**.
2. Navigate to the firmware update file and click **Open**.
3. Review the confirmation message and click **OK**.
   The update installs on your device. When the update is complete, your My Cloud Mirror device reboots.
Replacing Drives

Identifying a Faulty Hard Drive
Replacing a Drive
Rebuilding the Drive
Returning a WD Drive

The My Cloud Mirror device is a limited user-serviceable product that allows you to replace the hard drives in the enclosure. You can use WD hard drives or another brand’s hard drive.

Important: For best performance, WD recommends inserting WD Red™ hard drive assemblies into the unit’s enclosure. Visit: http://support.wdc.com/ and search the knowledge base for Knowledge Base Answer ID 8 to get detailed instructions on obtaining a replacement drive for this product.

Following are instructions for replacing a faulty drive or, if your My Cloud Mirror model did not come with drives, for inserting drives.

Identifying a Faulty Hard Drive

If the LEDs on the unit are flashing or you have received an alert, a hard drive may be faulty. To determine which drive is faulty, do the following:

1. On the dashboard’s navigation panel, click Storage and then Disk Status.

2. If one of the drives is Bad or has Failed, select it and view detailed information on the Hard Drive Information dialog box:

   Note: The drive number corresponds to the 1 or 2 decal on the drive.

In the event a fault occurs, and you would like to service the device yourself, visit WD Technical Support at support.wdc.com and search for Knowledge Base Answer ID 8 to obtain detailed instructions on obtaining a replacement drive. When contacting Technical Support, have the following information ready: the My Cloud Mirror device’s serial number, date of purchase, and the serial number of the internal hard drive(s) requiring replacement.
Replacing a Drive

When replacing an existing drive, you may use a drive made by another company. For a list of compatible drives, go to http://www.wdc.com/en/products/products.aspx?id=1640

Removing a Drive

**Important:** Before getting started, power off the unit and disconnect all of its cables. Place the unit on a clean and stable surface.

If your My Cloud Mirror still contains the faulty (drive), you must first remove it before you can insert the new one.

1. Reveal the hard drives by pressing the indented button on the top of the device and pulling up the door.
2. Remove the bracket used for holding drives in.
3. Pull the plastic tab at the back of the drive and with your other hand, guide the drive up and out of the enclosure.

Inserting a Drive

**Important:** To avoid electrostatic discharge (ESD) problems, ground yourself by touching metal before handling the device.

Preparing a Drive

For WD replacement drives, reuse the screws and tabs attached to the faulty drive.

*Note:* A standard phillips-head screwdriver is all you need.

1. Using the parts from the faulty drive, attach a plastic tab to the top hole in the drive’s side (on the right if the green board is facing you).
2. Attach a screw to the corresponding hole on the other side of the drive.
3. Attach label 1 or 2 to the top of the drive. Label 1 is on the left and label 2 is on the right, when looking down on the top of the unit. There are corresponding numbers on the cross brace label.
Inserting One or Both Drives

1. Press the indent on the top of the unit to open the door and remove the bracket that holds the drives in.
2. When looking down on the top of the unit with the front panel towards you, If you are inserting two drives, arrange them so that the connectors at the bottom face in. (The green boards should face each other.) If inserting one drive, the green board faces the middle of the unit.
3. Gently slip a drive into the slot. Make sure the plastic tab is sticking up at the back of the unit. Repeat with the other drive, if applicable.
4. Screw the bracket over the tops of the drives. Close the door and firmly push down until it locks into place.
5. Reconnect the network and power cables to the device.

Rebuilding the Drive

Depending on the RAID settings, the replacement drive may rebuild automatically, or you may need to rebuild it manually.

If any type of RAID and Auto-Rebuild have been set on the Storage Screen, the drive rebuilds automatically. If Auto-Rebuild has not been set, the rebuild results are as follows:

<table>
<thead>
<tr>
<th>If RAID is...</th>
<th>Then...</th>
</tr>
</thead>
</table>
| RAID 0        | The data on the volume will no longer be accessible and must be recreated.  
  1. Rebuild the drive. See “RAID Storage” on page 60.  
  2. Reload data from a backup or the original source. |
| RAID 1        | Data is mirrored to the second drive in the volume and is still accessible.  
  Data is recoverable from the working good drive.  
  1. Rebuild the drive. See “RAID Storage” on page 60 |
| Spanning      | Data on the volume is no longer accessible. Data on the other drive may be recoverable but will no longer be accessible from the My Cloud Mirror device.  
  1. Rebuild the drive. See “RAID Storage” on page 60.  
  2. Reload data from a backup or the original source. |
<table>
<thead>
<tr>
<th>If RAID is...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>JBOD</td>
<td>Data on the volume is no longer accessible. Data on other volumes is still accessible. 1. Rebuild the drive. See “RAID Storage” on page 60 2. Reload data from a backup or the original source.</td>
</tr>
</tbody>
</table>

For more information about rebuilding a replacement drive, search the WD Knowledge Base for Knowledge Base Answer ID 11107.

**Returning a WD Drive**

**Important:** Do not disassemble the internal drive and attached assembly components. Return the entire internal drive assembly intact to WD.

Return the faulty drive following the instructions provided in WD Knowledge Base Answer ID 8.
Regulatory and Warranty Information

Regulatory Compliance

Federal Communications Commission (FCC) Class B Information
Operation of this device is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

FCC Requirements, Part 15
This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer’s instruction manual, may cause interference with radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the retailer or an experienced radio/television technician for help.

Any changes or modifications not expressly approved by WD could void the user’s authority to operate the equipment.

ICES/NMB-003 Compliance
Cet appareil DE la classe B est conforme à la norm NMB-003 du Canada.
This device complies with Canadian ICES-003 Class B.

Safety Compliance
Approved for US and Canada. CAN/CSA-C22.2 No. 60950-1, UL 60950-1: Safety of Information Technology Equipment.

Approved for the Etats-Units et el Canada. CAN/CSA-C22.2 No. 60950-1: Secret equipment DE technologie de l’information.

This product is intended to be supplied by a listed limited power source, double insulated, or direct plug-in power unit marked “Class 2.”

CE Compliance for Europe

Warranty Information (All Regions Except Australia/New Zealand)

Obtaining Service

WD values your business and always attempts to provide you the very best of service. If this Product requires maintenance, either contact the dealer from whom you originally purchased the Product or visit our product support Web site at http://support.wd.com for information on how to obtain service or a Return Material Authorization (RMA). If it is determined that the Product may be defective, you will be given an RMA number and instructions for Product return. An unauthorized return (i.e., one for which an RMA number has not been issued) will be returned to you at your expense. Authorized returns must be shipped in an approved shipping container, prepaid and insured, to the address provided on your return paperwork. Your original box and packaging materials should be kept for storing or shipping your WD product. To conclusively establish the period of warranty, check the warranty expiration (serial number required) via http://support.wd.com. WD shall have no liability for lost data regardless of the cause, recovery of lost data, or data contained in any Product placed in its possession.
Limited Warranty

WD warrants that the Product, in the course of its normal use, will for the term defined below, be free from defects in material and workmanship and will conform to WD’s specification therefor. The term of your limited warranty depends on the country in which your Product was purchased. The term of your limited warranty is for 2 years in the North, South and Central America region, 2 years in the Europe, the Middle East and Africa region, and 2 years in the Asia Pacific region, unless otherwise required by law. The term of your limited warranty period shall commence on the purchase date appearing on your purchase receipt. WD may at its discretion make extended warranties available for purchase. WD shall have no liability for any Product returned if WD determines that the Product was stolen from WD or that the asserted defect a) is not present, b) cannot reasonably be rectified because of damage occurring before WD receives the Product, or c) is attributable to misuse, improper installation, alteration (including removing or obliterating labels and opening or removing external enclosures), unless the product is on the list of limited user-serviceable products and the specific alteration is within the scope of the applicable instructions, as found at http://support.wd.com, accident or mishandling while in the possession of someone other then WD. Subject to the limitations specified above, your sole and exclusive warranty shall be, during the period of warranty specified above and at WD’s option, the repair or replacement of the Product with an equivalent or better Product. The foregoing warranty of WD shall extend to repaired or replaced Products for the balance of the applicable period of the original warranty or ninety (90) days from the date of shipment of a repaired or replaced Product, whichever is longer.

The foregoing limited warranty is WD’s sole warranty and is applicable only to products sold as new. The remedies provided herein are in lieu of a) any and all other remedies and warranties, whether expressed, implied or statutory, including but not limited to, any implied warranty of merchantability or fitness for a particular purpose, and b) any and all obligations and liabilities of WD for damages including, but not limited to accidental, consequential, or special damages, or any financial loss, lost profits or expenses, or lost data arising out of or in connection with the purchase, use, or performance of the Product, even if WD has been advised of the possibility of such damages. In the United States, some states do not allow exclusion or limitations of incidental or consequential damages, so the limitations above may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Warranty Information (Australia/New Zealand only)

For consumers purchasing products in Australia and New Zealand, please refer to this warranty information.

Nothing in this warranty modifies or excludes your legal rights under the Australian Competition and Consumer Act or the New Zealand Consumer Guarantees Act. This warranty identifies WD’s preferred approach to resolving warranty claims which is likely to be quick and simple for all parties.

No other warranties either express or implied by law, including but not limited to those contained in the Sale of Goods Act, are made with respect to the Product. If you purchased your Product in New Zealand for the purposes of a business, you acknowledge and agree that the New Zealand Consumer Guarantees Act does not apply.

In Australia, our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if goods fail to be of acceptable quality and the failure does not amount to a major failure. What constitutes a major failure is set out in the Australian Consumer Law.

Warranty

WD warrants that the Product, in the course of its normal use, will for the term defined below, be free from defects in material and workmanship and will conform to WD’s specifications. The term of your warranty is 2 years in Australia and New Zealand, unless otherwise required by law. The term of your warranty period shall commence on the purchase date appearing on your purchase receipt from an authorized distributor, authorized reseller or regional WD return center where the Product was first shipped by WD. WD may at its discretion make extended warranties available for purchase. WD shall have no liability for any Product returned if WD determines that the Product was (i) not purchased from an authorized distributor or authorized reseller, (ii) not used in accordance with WD specifications and instructions, (iii) not used for its intended function, or (iv) stolen from WD, or that the asserted defect a) is not present, b) cannot reasonably be rectified because of damage occurring before WD receives the Product, or c) is attributable to misuse, improper installation, alteration (including removing or obliterating labels and opening or removing external enclosures), including the mounting frame, unless the product is on the list of limited user-serviceable products and the specific alteration is within the scope of the applicable instructions, as found at http://support.wd.com, accident or mishandling while in the possession of someone other then WD.

PRODUCTS ARE COMPLEX AND FRAGILE ITEMS THAT MAY OCCASSIONALY FAIL DUE TO (A) EXTERNAL CAUSES, INCLUDING WITHOUT LIMITATION, MISHANDLING, EXPOSURE TO HEAT, COLD, AND HUMIDITY, AND POWER FAILURES, OR (B) INTERNAL FAULTS. SUCH
FAILURES CAN RESULT IN THE LOSS, CORRUPTION, DELETION OR ALTERATION OF DATA. NOTE THAT YOU SHALL BE RESPONSIBLE FOR THE LOSS, CORRUPTION, DELETION OR ALTERATION OF DATA HOWEVER CAUSED, AND FOR BACKING UP AND PROTECTING DATA AGAINST LOSS, CORRUPTION, DELETION OR ALTERATION. YOU AGREE TO CONTINUALLY BACK UP ALL DATA ON THE PRODUCT, AND TO COMPLETE A BACKUP PRIOR TO SEEKING ANY GENERAL SERVICE AND TECHNICAL SUPPORT FROM WD.

In Australia, if the Product is not of a kind ordinarily acquired for personal, domestic or household use or consumption, provided it is fair and reasonable to do so, WD limits its liability to replacement of the Product or supply of equivalent or better Product.

This warranty shall extend to repaired or replaced Products for the balance of the applicable period of the original warranty or ninety (90) days from the date of shipment of a repaired or replaced Product, whichever is longer. This warranty is WD’s sole manufacturer’s warranty and is applicable only to Products sold as new.

Obtaining Service

WD values your business and always attempts to provide you the very best of service. Should you encounter any problem, please give us an opportunity to address it before returning this Product. Most technical support questions can be answered through our knowledge base or email support service at http://support.wd.com. If the answer is not available or, if you prefer, please contact WD at the applicable telephone number shown in the front of this document.

If you wish to make a claim, you should initially contact the dealer from whom you originally purchased the Product. If you are unable to contact the dealer from whom you originally purchased the Product, please visit our product support Web site at http://support.wd.com for information on how to obtain service or a Return Material Authorization (RMA). If it is determined that the Product may be defective, you will be given an RMA number and instructions for Product return. An unauthorized return (i.e., one for which an RMA number has not been issued) will be returned to you at your expense. Authorized returns must be shipped in an approved shipping container, prepaid and insured, to the address provided with your RMA number. If following receipt of a qualifying claim under this warranty, WD or the dealer from whom you originally purchased the Product determines that your claim is valid, WD or such dealer shall, at its discretion, either repair or replace the Product with an equivalent or better Product or refund the cost of the Product to you. You are responsible for any expenses associated with a claim under this warranty. The benefits provided to you under this warranty are in addition to other rights and remedies available to you under the Australian Competition and Consumer Act or the New Zealand Consumer Guarantees Act.

Your original box and packaging materials should be kept for storing or shipping your WD product. To conclusively establish the period of warranty, check the warranty expiration (serial number required) via http://support.wd.com.

Appendix A: My Cloud Mirror Quick User Guide

This guide is primarily for My Cloud Mirror users, rather than the administrator.

Logging into My Cloud Mirror

1. Enter the name of your My Cloud Mirror device (default name: wdmycloudmirror) in the browser’s address field:
   - http://<device name> (Windows) (Example: http://wdmycloudmirror)
   - http://<device name>.local (Mac) (Example: http://wdmycloudmirror.local)
2. Click Enter.

3. On the My Cloud Mirror Login page, enter your User name and Password (the default is no password).
4. Click Login. The My Cloud Mirror dashboard home page displays.
The Dashboard Home Page

The My Cloud Mirror Home page has an information bar at the top right, a navigation icon bar across the page, an instant overview of the status of the device's main functions and links for updating settings.

Information Icons

The Information Icons, at the top of the page, provide quick access to:

- Attached USB device(s)
- Device alerts
- Online Help and Support
- User information

**Viewing the Dashboard Home Page**

The Home page is your gateway to the My Cloud Mirror device. From this page you can find:

- The capacity of the device and how the storage is allocated
- The status of the device and current firmware version
- Number of cloud devices, users and apps
- Current network activity
**Capacity**

The Capacity panel displays the amount of free storage left on your My Cloud Mirror device and how the storage is allocated.

*Note:* Storage allocation information only appears when the Cloud Services option is ON. See “Cloud Access” on page 79 for steps to enable Cloud Services.

![Capacity Panel]

**Device**

The Device section identifies the overall health of the system, indicates the current version of your firmware, and informs you if firmware updates are available.

![Device Panel]

**Diagnostics**

The Diagnostics section displays a snapshot of the system’s components and identifies the overall health of the My Cloud Mirror device.

1. To see details about the status of system components, click the arrow on the right.
2. To return to the Home page, click Close.

**Firmware**

The Firmware section displays the current version of firmware loaded on your My Cloud Mirror device. A blue check mark indicates that your firmware is up-to-date.

*Note:* If new firmware is available, see “Firmware Update” on page 100 for information on updating your My Cloud Mirror device.

1. To view whether an updated version of the firmware is available, click the arrow to the right of Firmware to display firmware availability:
2. If an update is available, click Install and Reboot to update your device.
3. To return to the Home page, click OK or Cancel.
Network Activity

The Network Activity panel displays the system activities and processes that are running on your My Cloud Mirror device. At a glance, you can see the network, CPU, and RAM activity.

1. To view a list of all the system activities and processes that are running on your My Cloud Mirror device, click the arrow on the right of the panel to display the device activity panel.

- **CPU**: Click the right arrow to view the CPU activity. Click `Back` to return to the Device Activity pane. Click `Close` to return to the Home page.

- **Memory**: Click the right arrow to view the Memory activity. Click `Back` to return to the Device Activity pane. Click `Close` to return to the Home page.
- **Network**: Click the right arrow to view the network activity. Click **Back** to return to the Device Activity pane. Click **Close** to return to the Home page.

- **Process**: Click the right arrow to view the process information, including the list of active processes and the amount of CPU and Memory usage for each process. Click **Back** to return to the Device Activity pane. Click **Close** to return to the Home page.

**Cloud Devices**

The Cloud Devices panel displays the number of cloud devices currently accessing the My Cloud Mirror device remotely. In this example, one cloud device is accessing it remotely.

1. To add cloud access for a user, click the plus sign (+) in the lower right of the panel to display:

2. To generate an activation code, click **Get Code**.
3. Follow the page instructions to connect your tablet or mobile device to the My Cloud Mirror device.

Users
The Users panel displays the number of users currently set up to use the My Cloud Mirror device.

1. To add a user, click the plus (+) sign in the lower right of the panel:

   ![Add User Screen]

   **Note:** When you enter the email address on the Add User screen, a new account is created for cloud access. The user receives an email with instructions on how to set up and activate a password for cloud access.

2. Enter the required information and click **Apply**.

   **Note:** Users can also be added, and configured, from the Set Up Users page.

Apps
The Apps panel displays the apps currently installed on your My Cloud Mirror device.
1. To view the installed apps, click the arrow in the lower right of the panel to display:

   ![Installed Apps]

   **Note:** To install an app, see “Managing Apps on My Cloud Mirror” on page 57.

2. To return to the Home page, click **Close**.
Appendix B: Joomla!® Setup Guide

Joomla! is an award-winning content management system (CMS) that allows you to build Web sites and powerful online apps. For additional information on Joomla!, visit http://www.joomla.org/

Joomla! is one of the many apps available for use from your My Cloud Mirror device. Provided in this section are the steps you’ll need to set up Joomla!.

Requirements

- Database (e.g., MySQL, FireBird, MS SQL server, Oracle, PostgreSQL, SQLite)
- If you’re using phpMyAdmin as your SQL database, ensure that you’ve added the phpMyAdmin app to your My Cloud Mirror.

Setting Up Joomla!

1. Add the Joomla! app to your My Cloud Mirror device (see “Adding an App” on page 58 for information on adding an app to your device).
2. On the App screen, click Joomla! in the left pane.
3. In the Configuration URL field, click the configuration URL link. The Joomla! Installation page displays.
4. Select a language from the scrolling window. This is the language that will be used during Joomla! installation.

5. Click Next.
6. Review the Joomla! Pre-installation check to ensure that all items passed and click Next.

7. Read the Joomla! license declaration and click Next.

8. Complete the Database Configuration screen with the following information and click Next.
   - **Database Type**: Select MySQL if not already selected.
   - **Host Name**: Enter localhost.
   - **Username**: Enter your MySQL account user name.
     - If you’re using the phpMyAdmin app, enter admin.
   - **Password**: Enter your MySQL password.
     - If you’re using the phpMyAdmin app, enter admin.
   - **Database Name**: Enter a name for your database to be used for Joomla.
   - **Table Prefix**: Enter a table prefix. The prefix should be three - four characters long, contain only alphanumeric characters, and MUST end in an underscore. Make sure that the prefix chosen is not used by other tables.
     - You can also use the randomly generated table prefix pre-loaded into this field.
   - **Old Database Process**: Select one of the following options:
     - **Backup**: Backs up the old database.
     - **Remove**: Removes the old database
9. Keep the FTP Configuration screen default settings as they are and click **Next**.

10. Complete the Database Configuration screen with the following information:
   - **Site Name**: Enter a name for your Joomla! site.
   - **Your Email**: Enter the email address of the individual that will act as the administrator for the Joomla! site.
   - **Admin Username**: Enter the user name you’ll use to log into your Joomla! site.
   - **Admin Password**: Enter the password you’ll use to log into your Joomla! site.
- **Confirm Admin Password**: Reenter the password you entered in the Admin Password field.

11. Click **Install Sample Data**.
12. Click **Next**.
13. Review the information on the screen and click **Remove installation folder**.

14. At the top of this page, click **Site**. Your Joomla! site has been created and installed on your My Cloud Mirror device.
Appendix C: phpBB Setup Guide

phpBB™ is a popular Internet forum package written in the PHP scripting language. You can use phpBB to create your own customized forum that can be accessed and commented on from any Internet connection.

phpBB is one of the many apps available for use from your My Cloud Mirror device. Provided in this section are the steps you’ll need to set up phpBB.

Requirements
- MySQL database

Setting Up phpBB
1. Add the phpBB app to your My Cloud Mirror device (see “Adding an App” on page 58).
2. On the App screen, click phpBB in the left pane.
3. In the Configuration URL field, click the configuration URL link. The phpBB Installation page displays.
4. Review the phpBB introduction and click the Install tab.
5. Review the Welcome to Installation information on your screen and click Proceed to next step.
6. Review the Installation compatibility information and click **Start Install**.

7. On the Database configuration screen, enter the following information and click **Proceed to Next Step**.
   - **Database Type**: Select **MySQL** if not already selected.
   - **Database server hostname or DSN**: Enter **localhost**.
   - **Database server post**: Leave this field blank.
   - **Database name**: Enter a name for your database to be used for phpBB.
   - **Database username**: Enter your MySQL account user name.
     - If you’re using the phpMyAdmin app, enter **admin**.
   - **Database password**: Enter your MySQL password.
     - If you’re using the phpMyAdmin app, enter **admin**.
   - **Table Prefix**: Enter a table prefix. The prefix must start with a letter and must only contain letters, numbers and underscores. Make sure that the prefix chosen is not used by other tables.
     You can also use the randomly generated table prefix pre-loaded into this field.
8. Review the Database connection screen to ensure that it was performed successfully and click Proceed to next step.

9. Complete the Administrator Configuration screen with the following information and click Proceed to next step.
   - **Default board language**: Select the language for your bulletin board from the drop-down menu.
   - **Administrator username**: Enter the user name you’ll use to log into your bulletin board.
   - **Administrator password**: Enter the password you’ll use to log into your bulletin board.
   - **Confirm administrator password**: Reenter the password you entered in the Administrator password field.
   - **Contact e-mail address**: Enter the email address of the individual administering the board.
   - **Confirm contact e-mail**: Reenter the email address you entered in the Contact e-mail address field.
10. Review the Administrator details screen to ensure that the administrator configuration was successful and click **Proceed to next step**.

11. Review the screen and click **Proceed to next step**.

12. Review the information on the screen and click **Proceed to next step**.

**Note:** Keep the default settings on this screen for now. If you find that you need to update this information in the future, you can do so on the Administration Control Panel after phpBB is installed.
13. Review the information on the screen and click **Proceed to next step**.

14. Review the information on the screen. phpBB is now installed.
Appendix D: Supported RAID Modes

The chart below identifies those modes that are supported for RAID storage.

<table>
<thead>
<tr>
<th>Supported RAID Modes</th>
<th>1 Disk</th>
<th>2 Disks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spanning</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>
<td>RAID 0</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>
<td>RAID 1</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>
<td>JBOD</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

Appendix E: RAID Migrations

The chart below identifies the RAID migration path allowed on your My Cloud Mirror device.

<table>
<thead>
<tr>
<th>From</th>
<th>To</th>
</tr>
</thead>
<tbody>
<tr>
<td>JBOD (1 disk)</td>
<td>RAID 1 (2 disks)</td>
</tr>
</tbody>
</table>

Appendix F: Safe Mode Firmware Update Procedures

If you see the following screen, use the steps outlined below to recover your server from safe mode.

**Note:** Before performing these steps, download My Cloud Mirror firmware from the WD support website (http://support.wd.com) and save it to a location to which you can browse from your computer. Make sure to unzip the firmware file.
1. Refer to your router user guide and log on to your router’s DHCP LAN/Device Client Table to obtain the IP address for your device.

2. Type device IP address in a browser window. The Safe Mode UI appears.
3. Browse to the location where you saved the downloaded firmware.
4. Click **Apply** to load the firmware.
5. On the dialog box, click **OK**. The device reboots.
6. Once your reboot is completed, ensure that you clear your browser’s cache. Check your browser’s help to determine the best way to clear the cache.
7. Once your device has completed the reboot, we recommend that you do a system restore. See “Restoring your System” on page 93.

**Appendix G: Technical Specifications**

<table>
<thead>
<tr>
<th>Specification</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Ethernet</strong></td>
<td>High performance (100/1000) Gigabit Ethernet connection</td>
</tr>
<tr>
<td><strong>Internal hard drives</strong></td>
<td>2 WD Red 3.5-inch SATA hard drives</td>
</tr>
<tr>
<td><strong>Supported protocols</strong></td>
<td>CIFS/SMB, NFS, FTP, AFP</td>
</tr>
<tr>
<td><strong>I/O ports</strong></td>
<td>Gigabit Ethernet (RJ-45) port</td>
</tr>
<tr>
<td><strong>Data transfer rate</strong></td>
<td>USB 3.0 up to 5 Gb/s</td>
</tr>
</tbody>
</table>

*A USB 3.0 host and USB 3.0 certified cable are required to obtain USB 3.0 performance.*
### Compatibility

*Note: Compatibility may vary depending on user’s hardware configuration and operating system.*

- Operating systems:
  - Windows 10
  - Windows 8 or 8.1
  - Windows 7
  - Windows Vista
  - El Capitan (Mac OS 10.11)
  - Yosemite (Mac OS 10.10)
  - Mavericks (Mac OS 10.9)
  - Mountain Lion (Mac OS 10.8)
  - Lion (Mac OS 10.7)

- Browsers:
  - Internet Explorer 10.0 or higher on supported Windows computers
  - Safari 6.0 or higher on supported Mac computers
  - Firefox 30 or higher on supported Windows and Mac computers
  - Google Chrome 31 or higher on supported Windows and Mac computers

### Physical dimensions

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
